The Centre for Education in Mathematics and Computing is pleased to announce the results of the 2012 Canadian Senior and Intermediate Mathematics Contests.

Our congratulations go to all who participated in this year's CSMC and CIMC. This year's Contests were resounding successes, with averages of 35.6 and 34.0, respectively.

As always, we would like to thank the hard-working Problems Committees. Many of the members of these Committees are active secondary school teachers who volunteer their time and contribute dozens of hours of expertise. Without their intriguing and sometimes amusing problems, these Contests would not be possible.

We would also like to thank all participants, both teachers and students. We hope that the papers provided you with some interesting mathematics to think about and play with. Thank you for your support! Please continue to encourage your colleagues and fellow students to become involved in our activities.

Le Centre d'éducation en mathématiques et en informatique a d'annoncer les résultats du Concours canadiens de mathématiques de niveau supérieur et intermédiaire 2012.

Nos félicitations vont à tous les participants du CCMS et du CCMI de cette année. Les Concours de cette année retentissaient de succès, avec des moyennes de 35,6 et 34,0, respectivement.

Nous aimerions surtout remercier les Comités de problèmes pour leur dur travail. Plusieurs membres de ces Comités sont des enseignant(e)s d'école secondaire actifs qui offre leur temps et contribuent des douzaines d'heures d'expertise. Sans leurs problèmes perspicaces et amusants, ces Concours ne seraient pas possibles.

Nous aimerions remercier aussi tous les participants incluant les enseignants et les étudiants. Nous espérons que les concours vous ont offert des mathématiques intéressantes qui vous ont amusées et portées à réfléchir. Merci pour votre soutien continué!

CANADIAN SENIOR MATHEMATICS CONTEST

Part A

1. Very well done. Some students missed the lengths of one of the edges (for example, the 5) when calculating the perimeter.
Average: 4.6
2. Well done. Some students obtained the roots of the equation $(0, 2, -2)$ but did not calculate their product. Some other students correctly determined the roots, but then wrote down a product of -4 .
Average: 4.6
3. Well done by many students. Some students used a calculator to determine an approximate value for the right hand side of the equation (1.41×10^{28}) and then used logarithms to determine an approximate value for x , instead of its exact value. Some other students first used exponent rules correctly to obtain $3^x = 3^{58} + 3^{58} + 3^{58}$, but then concluded that $3^x = 3^{3(58)}$ or $x = 174$.
Average: 4.4
4. This problem was generally quite well done. Many students included a diagram in their solution to help consolidate the given information.
Average: 3.9
5. Generally this problem was done reasonably well, with the majority of students making some progress toward the solution, by at least finding out some of the dimensions of the right triangles surrounding either the square in the original placement or after rotation. Quite a few students had difficulty visualizing the rotation. Some ignored the rotation and found point P in the original location. Some rotated until P was at $x = 39$. Others thought the square somehow transformed so that point S reach the point $(39, 0)$. Still others thought the square was translated to the right along the x -axis.
Average: 2.3
6. This was a difficult problem. Generally, there was very little in the way of organized discussion. There were very few partial marks awarded for this question, due to the lack of explanation or organized presentation.
Average: 0.2

Part B

1. This problem was very well done with few trends among incorrect solutions. In part (b), some students did correctly calculate $w = 8$ but then did not determine the value of y . In (c), there were many solutions by trial and error; these could receive full marks if the student explicitly checked that their answer satisfied the given configuration.
Average: 9.2
2. Part (a) was attempted by most students. While most students gave a correct answer, some students gave the answer as $(1, 0)$, not noting that the integers in the solution needed to be positive. In part (b), most students were able to determine the pair (u, v) , but some did not show that their pair (u, v) satisfied the equation. In part (c), many students worked with specific numbers rather than working in a more general setting and determining c and d in terms of a and b . Part (d) was more difficult to do for students who did not see the connection to part (c).
Average: 4.6
3. Part (a) was generally well done; applications of the Pythagorean Theorem led directly to the answers. In part (b), many students unfortunately started with false assumptions and then tried to prove the result or assumed properties of isosceles triangles and used them to try to conclude that the triangle is isosceles. A good number of students solved this problem with two applications of the cosine law in carefully chosen triangles. Very few students made much progress in part (c).
Average: 1.8

CANADIAN INTERMEDIATE MATHEMATICS CONTEST

Part A

1. Very well done. A common mistake was giving 11 as the final answer having forgotten to count Jeanne as one of the persons in the line.
Average: 4.9
2. Well done. Quite a few students expanded the powers and then compared their answers. Many students changed the bases to 2 and then compared the exponents to determine the answer.
Average: 4.6
3. Well done. The only consistent difficulty was students who did not answer the question giving instead the side length of the square, the dimensions of the rectangle, or the perimeter of the rectangle rather than the requested rectangle length.
Average: 4.4
4. Generally well done. Many students stopped after finding the area of $\triangle AFC$ and the length of AC . Using AC as base and ED as height of $\triangle ACE$ bothered some students who wanted actual lengths for CD and DA .
Average: 4.1
5. In this problem, students either obtained the correct answer or made very little progress, with not much in between. A number of students made incorrect assumptions about the angles around O or about symmetry in the diagram.
Average: 1.6
6. This problem was difficult. Students who used the given definition to write down an equation involving x , y and z then had reasonable success at finding one or more correct triples. Some students tried the problem purely by trial and error and did not have much success.
Average: 1.0

Part B

1. Part (a) was well done. A large percentage of students got the correct answer to part (b), but did not provide enough justification as to why their answer was correct. Most students continued to extend their thinking from the earlier parts and had good success in (c) and (d).
Average: 7.7
2. Part (a) was attempted by most students. While many students gave a correct answer for point P as $(10, 0)$, some students found the y -intercept of 5 instead of the x -intercept of 10. When finding point Q , many students solved the two equations in two unknowns while other students used a less accurate method of drawing both lines on the Cartesian Coordinate Plane using the slope and y -intercept of each line. Part (b) was well done. Some students had difficulty determining the height (altitude) from Q of obtuse $\triangle OPQ$ using base OP or did not choose OP as base because the perpendicular height lies outside the triangle itself. Part (c) was well done by those who attempted it. Part (d) required the student to recognize that SQ and SO do not form a right angle and then approach the problem using one of a many other techniques such drawing in a trapezoid and calculating the value of t using areas.
Average: 3.2
3. Many students tried to use differences or their own pattern to do all of the parts of this problem rather than using the rule specified. Those that used the rule generally did well in part (a). In part (b), many students did not explicitly consider the case $x \leq \frac{1}{2}$ and so lost a mark. In part (c), many students only had one answer with only a few considering the whole “tree”. Only a small number of students completed part (d) successfully. A few students obtained the answer 129 but the other two answers and proper justification for them was rarely seen.
Average: 2.5

CONCOURS CANADIEN DE NIVEAU SUPÉRIEUR

Partie A

1. Ce problème a été très bien réussi. Certains élèves ont omis la longueur d'un côté, par exemple le 5, lorsqu'ils ont calculé le périmètre.
Moyenne: 4,6
2. Ce problème a été bien réussi. Certains élèves ont déterminé les racines de l'équation, soit 0, 2 et -2 , mais ont omis de calculer leur produit. D'autres ont déterminé les racines et ont donné -4 comme produit.
Moyenne: 4,6
3. Ce problème a été bien réussi par beaucoup d'élèves. Certains élèves ont utilisé une calculatrice pour déterminer une valeur approximative du membre de droite de l'équation, soit $1,41 \times 10^{28}$, pour ensuite déterminer une valeur approximative de x à l'aide de logarithmes, au lieu de calculer sa valeur exacte. D'autres ont utilisé correctement les lois des exposants pour obtenir $3^x = 3^{58} + 3^{58} + 3^{58}$ et conclure que $3^x = 3^{3(58)}$, d'où $x = 174$.
Moyenne: 4,4
4. Ce problème a été plutôt bien réussi. Beaucoup d'élèves ont utilisé un diagramme pour consolider les renseignements donnés.
Moyenne: 3,9
5. De façon générale, le problème a été bien abordé. La majorité des élèves ont réussi à cheminer vers une solution en déterminant les longueurs de certains côtés des triangles qui entourent le carré avant ou après la rotation. Bon nombre d'élèves ont éprouvé de la difficulté à visualiser la rotation. Certains ont ignoré la rotation et ont laissé le point P dans sa position initiale. Certains ont fait subir une rotation au carré jusqu'à ce que P soit sur la droite d'équation $x = 39$. D'autres semblaient croire que le point S aboutirait au point $(39, 0)$. D'autres ont fait subir au carré une translation horizontale.
Moyenne: 2,3
6. Ce problème était difficile. De façon générale, les tentatives de solution manquaient au niveau de la présentation ou de la discussion. C'est pourquoi peu de points ont été accordés dans le cas de réponses erronées.
Moyenne: 0,2

Partie B

1. Ce problème a été très bien réussi. Dans la partie (b), certains élèves ont réussi à obtenir $w = 8$ sans continuer pour calculer la valeur de y . Dans la partie (c), bon nombre d'élèves ont procédé par tâtonnements. Leurs solutions recevaient le maximum de points si elles montraient explicitement qu'elles vérifiaient les conditions de la figure.
Moyenne: 9,2
2. La plupart des élèves ont résolu la partie (a) avec succès. Certains ont donné $(1, 0)$ comme solution, oubliant que les nombres devaient être strictement positifs. Dans la partie (b), la plupart des élèves ont réussi à déterminer le couple (u, v) , mais certains n'ont pas démontré que le couple (u, v) vérifiait l'équation. Dans la partie (c), bon nombre d'élèves ont travaillé avec des valeurs particulières plutôt que dans un contexte général en déterminant c et d en fonction de a et b . La partie (d) était difficile pour ceux et celles qui n'ont pas vu le lien avec la partie (c).
Moyenne: 4,6
3. La partie (a) a été plutôt bien réussie. L'utilisation du théorème de Pythagore menait directement aux réponses. Dans la partie (b), bon nombre d'élèves ont tenté de résoudre le problème à partir de fausses hypothèses. D'autres ont supposé que le triangle XYZ avait certaines propriétés des triangles isocèles pour démontrer que le triangle était isocèle. Bon nombre d'élèves ont réussi en utilisant deux fois la loi du cosinus dans des triangles bien choisis. Très peu d'élèves ont réussi à cheminer dans la partie (c).
Moyenne: 1,8

CONCOURS CANADIEN DE NIVEAU INTERMÉDIAIRE

Partie A

1. Ce problème a été très bien réussi. L'erreur la plus fréquente était d'oublier de compter Jeanne dans la file et de donner 11 comme réponse.
Moyenne: 4,9
2. Ce problème a été bien réussi. Certains d'élèves ont évalué les puissances pour ensuite comparer les valeurs. Bon nombre d'élèves ont transformé les puissances en puissances de 2 pour ensuite comparer les exposants.
Moyenne: 4,6
3. Ce problème a été bien réussi. Toutefois, un nombre important d'élèves n'ont pas répondu à la question en donnant plutôt la largeur du rectangle ou la longueur des côtés du carré au lieu de la longueur du rectangle.
Moyenne: 4,4
4. Ce problème a été assez bien réussi. Bon nombre d'élèves se sont arrêtés après avoir déterminé l'aire du triangle AFC et la longueur AC . Certains élèves semblaient hésitants à utiliser la base AC du triangle ACE et la hauteur correspondante ED pour déterminer l'aire du triangle. Elles et ils semblaient s'acharner à vouloir connaître les longueurs CD et DA .
Moyenne: 4,1
5. De façon générale, les élèves ont soit réussi ou n'ont fait aucun progrès vers la réponse. Il n'y avait pas de milieu. Certains ont fait de fausses hypothèses au sujet des angles de sommet O ou au sujet de symétries dans la figure.
Moyenne: 1,6
6. Ce problème était difficile. Les élèves qui ont utilisé la définition pour obtenir des équations en x , y et z ont connu un certain succès à déterminer les triplets. Certains ont procédé par tâtonnements, sans succès.
Moyenne: 1,0

Part B

1. La partie (a) a été bien réussie. Un bon nombre d'élèves ont obtenu la bonne réponse dans la partie (b) sans justifier de façon suffisante. La plupart des élèves ont su utiliser les résultats des parties (a) et (b) pour réussir les parties (c) et (d).
Moyenne: 7,7
2. La plupart des élèves ont tenté de résoudre la partie (a). Bon nombre d'élèves ont réussi à obtenir les coordonnées (10, 0) du point P , mais d'autres ont déterminé l'ordonnée à l'origine plutôt que l'abscisse à l'origine et ont donné (0, 5) comme réponse. Pour déterminer les coordonnées du point Q , bon nombre d'élèves ont résolu un système de deux équations à deux inconnues, alors que d'autres ont tracé les droites en utilisant la pente et l'ordonnée à l'origine des deux droites, ce qui est moins précis. La partie (b) a été bien réussie. Certains élèves ne semblaient pas reconnaître la hauteur du triangle OPQ correspondant à la base OP , la hauteur étant à l'extérieur du triangle obtusangle. La partie (c) a été bien réussie par les élèves qui l'ont abordée. Dans la partie (d), il fallait reconnaître que SQ et SO ne forment pas un angle droit et utiliser une des nombreuses approches possibles, par exemple celles basées sur l'aire d'un rectangle ou d'un trapèze et l'aire de triangles.
Moyenne: 3,2
3. Bon nombre d'élèves ont tenté de résoudre toutes les parties du problème en définissant leurs propres règles au lieu d'utiliser les règles données pour définir la suite. Ceux et celles qui ont utilisé les règles données ont plutôt bien réussi la partie (a). Dans la partie (b), bon nombre d'élèves ont perdu un point en omettant de considérer de façon explicite la condition $x \leq \frac{1}{2}$. Dans la partie (c), bon nombre d'élèves n'ont pas considéré toutes les possibilités et n'ont donné qu'une réponse. Seul un petit nombre d'élèves ont réussi la partie (d). Quelques élèves ont obtenu la réponse 129 sans justification.
Moyenne: 2,5
