The Centre for Education in Mathematics and Computing is pleased to announce the results of the 2013 Canadian Senior and Intermediate Mathematics Contests.

Our congratulations go to all who participated in this year's CSMC and CIMC. This year's Contests were resounding successes, with averages of 34.9 and 36.9, respectively.

As always, we would like to thank the hard-working Problems Committees. Many of the members of these Committees are active secondary school teachers who volunteer their time and contribute dozens of hours of expertise. Without their intriguing and sometimes amusing problems, these Contests would not be possible.

We would also like to thank all participants, both teachers and students. We hope that the papers provided you with some interesting mathematics to think about and play with. Thank you for your support! Please continue to encourage your colleagues and fellow students to become involved in our activities.

Le Centre d'éducation en mathématiques et en informatique a d'annoncer les résultats du Concours canadiens de mathématiques de niveau supérieur et intermédiaire 2013.

Nos félicitations vont à tous les participants du CCMS et du CCMI de cette année. Les Concours de cette année retentissaient de succès, avec des moyennes de 34,9 et 36,9, respectivement.

Nous aimerions surtout remercier les Comités de problèmes pour leur dur travail. Plusieurs membres de ces Comités sont des enseignant(e)s d'école secondaire actifs qui offre leur temps et contribuent des douzaines d'heures d'expertise. Sans leurs problèmes perspicaces et amusants, ces Concours ne seraient pas possibles.

Nous aimerions remercier aussi tous les participants incluant les enseignants et les étudiants. Nous espérons que les concours vous ont offert des mathématiques intéressantes qui vous ont amusées et portées à réfléchir. Merci pour votre soutien continué!

CANADIAN SENIOR MATHEMATICS CONTEST

Part A

1. Very well done. There were few trends among incorrect solutions.  
Average: 4.9
2. Well done. Most students organized their solution by looking first at the possible combinations for Ben or for Riley and Wendy. A common mistake was the incorrect conclusion that when Ben gets the number 4, then Sara always gets the number 1 (she could get 1 or 3).  
Average: 4.5
3. Fairly well done. Common mistakes included incorrectly factoring  $99!$  in the denominator or incorrectly cancelling the  $99!$  in one term in the denominator.  
Average: 3.6
4. Well done by most students. Some students found the length of  $AP$  but did not calculate the area of the triangle. Many students rounded answers found using a calculator as opposed to working with exact values.  
Average: 4.2
5. Many students did some counting, but missed an important detail. For example, a number of students forgot to remove the cases where the four-digit number started with 0 (ie. the number 0123 is not a valid four-digit number). Some students listed out all 66 possible integers, or attempted to and missed several cases.  
Average: 2.3
6. Students found this difficult to approach. Many students tried several pairs  $(x, y)$ , but did not generalize to a range of pairs. Other students found a range of pairs but either did not count them at all or counted them incorrectly.  
Average: 1.1

Part B

1. Well done by most students. Many students presented clear, numerical or algebraic reasoning in their solutions. That being said, a good number of students needed to more clearly justify their statements.  
Average: 7.8
2. Part (a) was attempted by most students and was very well done. In part (b), most students saw the connection to part (a) and used this to factor the cubic equation. The most common mistake was not considering negative values for  $\theta$ . Most students who solved part (c) used a table. We also saw solutions where students sketched the cubic function and determined the values of  $\theta$  that make the function negative from the sketch.  
Average: 5.2
3. Part (a) was generally well done. The vast majority of students who attempted the problem found the four sequences. In part (b), many students made an assumption about  $x_1 = A$  without considering the case of  $x_1 = B$ . Carefully reasoning through how and why a contradiction is reached was quite often missed. In part (c), few students constructed a useful sequence and proved the desired results. Some students had less precise statements about "stretching" the sequence or "multiplying the sequence by  $r$ " which needed to be formalized. Part (d) saw very few students make progress.  
Average: 1.3

CANADIAN INTERMEDIATE MATHEMATICS CONTEST

Part A

1. Very well done. Some students did not know that  $\angle ABC$  and  $\angle CBE$  are supplementary angles that add to  $180^\circ$ . Some students determined the value of  $\angle BCE$  instead of the value of  $x$ .  
Average: 4.6
2. Very well done. Many students did not realize this question was asking for the lowest common multiple of the four given integers and that they need only look at multiples of both 6 and 8.  
Average: 4.0
3. Well done, except for some mechanical mistakes. Some students had algebraic difficulties with solving the equation after  $x = 3$  and  $y = 7$  were substituted. Other students had a few problems with substitution, especially substituting 8 for the second  $a$  when substituting 8 for  $x$  and 3 for  $a$ .  
Average: 4.3
4. Fairly well done. Students who understood that the shaded area was to be bisected using a line through the origin (as opposed to a horizontal line) generally had no difficulties with this problem.  
Average: 3.9
5. In this problem, many students were awarded part marks for an almost complete list of palindromes, or for counting too many possibilities. One frequent error was to begin with a palindrome and then multiply it by 6. This does not in general result in a palindrome and also misses some palindromes that are divisible by 6.  
Average: 2.9
6. This was a hard problem with a short solution that required a lot of insight. Part marks were awarded for incorrect triples if students demonstrated some ability to manipulate fractions.  
Average: 0.3

Part B

1. In part (a), many students unfortunately did not read to the end and thus found the reflections on the diagram but did not find the coordinates of these points. In part (b), students who knew what the question was asking did quite well. Some made mistakes by looking at an incorrect diagram with angled line segments or by looking at the diagram from part (c) and using some partial circumferences. In part (c), many students were able to find the correct volume. Finding the correct surface area was harder and many students did not understand what the two pieces of the formula represented and struggled with adding or subtracting too many pieces of circles.  
Average: 7.2
2. Part (a) was attempted successfully by many students. Part (b) was well done, although some students only gave a list of the cups that receive balls. Part (c) was also well done. Some students created lists and missed one of the numbers. In part (d), we saw a common error in solutions when students double-counted the first ball and calculated that the last ball goes  $338 \times 8 = 2366$  cups further along the circle from cup 1 instead of  $337 \times 7 = 2359$  cups further along the circle from cup 1.  
Average: 6.5
3. Many students were able to do parts (a) and (b). The most common error here was to consider only differences of adjacent pairs of numbers rather than differences for all pairs of numbers. Parts (c) and (d) were more difficult and required more care.  
Average: 3.2

**CONCOURS CANADIEN DE NIVEAU SUPÉRIEUR**

**Partie A**

1. Ce problème a été très bien réussi. Il y avait peu de tendances parmi les solutions erronées.  
Moyenne: 4,9
2. Ce problème a été bien réussi. La plupart des élèves ont présenté leur solution en considérant d'abord les cartes possibles que Benoît pouvait recevoir ou encore celles que René et Vianna pourraient recevoir. Bon nombre d'élèves ont conclu que si Benoît recevait la carte numéro 4, alors Sara devait recevoir la carte numéro 1 (elle pouvait recevoir la carte numéro 1 ou numéro 3).  
Moyenne: 4,5
3. Ce problème a été plutôt bien réussi. Bon nombre d'élèves ont mal factorisé  $99!$  au dénominateur ou annulé  $99!$  au numérateur et dans un seul terme au dénominateur.  
Moyenne: 3,6
4. Ce problème a été bien réussi par la plupart des élèves. Certains élèves ont déterminé la longueur de  $AP$ , mais n'ont pas déterminé l'aire du triangle. Bon nombre d'élèves ont arrondi les valeurs approximatives obtenues à l'aide de la calculatrice au lieu de travailler avec des valeurs exactes.  
Moyenne: 4,2
5. Beaucoup d'élèves ont compté, tout en omettant un détail important. Par exemple, certains n'ont pas soustrait de leur total les cas des nombres de quatre chiffres qui commençaient par le chiffre 0 (le nombre 0123 n'est pas un nombre de quatre chiffres). Certains élèves ont rédigé la liste des 66 nombres, alors que d'autres on tenté de le faire, tout en omettant plusieurs cas.  
Moyenne: 2,3
6. Les élèves ont eu du mal à cerner une approche possible. Bon nombre d'élèves ont procédé par tâtonnements avec plusieurs couples  $(x, y)$ , sans généraliser à des intervalles de couples. Certains élèves ont déterminé des intervalles de couples, sans compter les couples ou en comptant de façon erronée.  
Moyenne: 1,1

**Partie B**

1. Ce problème a été bien réussi par la plupart des élèves. Bon nombre d'élèves ont présenté un raisonnement numérique ou algébrique clair, alors qu'un nombre d'élèves auraient dû justifier leurs énoncés plus clairement.  
Moyenne: 7,8
2. La plupart des élèves ont entrepris de résoudre la partie (a) et ont réussi. Dans la partie (b), la plupart des élèves ont vu le lien avec la partie (a) et s'en sont servi pour factoriser le polynôme du troisième degré dans l'équation. L'erreur la plus commune a été l'omission de valeurs négatives de  $\theta$ . La plupart des élèves qui ont réussi la partie (c) ont utilisé un tableau. D'autres ont tracé la représentation graphique de la fonction correspondante du troisième degré et l'ont utilisée pour déterminer les valeurs de  $\theta$  qui donnent des valeurs négatives de la fonction.  
Moyenne: 5,2
3. De façon générale, la partie (a) a été bien réussie. La grande majorité de ceux qui ont abordé le problème ont réussi à déterminer les quatre suites. Dans la partie (b), bon nombre d'élèves ont fait une supposition au sujet de  $x_1 = A$  sans considérer le cas où  $x_1 = B$ . En général, ils ont éprouvé de la difficulté à raisonner convenablement afin de démontrer une contradiction. Dans la partie (c), peu d'élèves ont construit une suite utile pour faire la démonstration. Certains élèves ont utilisé un vocabulaire imprécis comme «étirer» la suite ou «multiplier la suite par  $r$ ». Peu d'élèves ont su aborder la partie (d).  
Moyenne: 1,3

**CONCOURS CANADIEN DE NIVEAU INTERMÉDIAIRE**

**Partie A**

1. Ce problème a été très bien réussi. Certains élèves ne savaient pas que les angles  $ABC$  et  $CBE$  sont supplémentaires et que leurs mesures ont une somme de  $180^\circ$ . Certains élèves ont déterminé la mesure de l'angle  $BCE$  au lieu de la valeur de  $x$ .  
Moyenne: 4,6
2. Ce problème a été très bien réussi.  
Beaucoup d'élèves n'ont pas compris que la question demandait de déterminer le plus petit commun multiple des quatre nombres et qu'il suffisait donc d'examiner les multiples de 6 et de 8.  
Moyenne: 4,0
3. Ce problème a été bien réussi, bien que les solutions comportaient souvent des erreurs de calcul. Après avoir reporté  $x = 3$  et  $y = 7$  dans l'équation donnée, certains élèves ont éprouvé de la difficulté à résoudre l'équation qui en résulte. D'autres ont éprouvé de la difficulté à reporter  $x = 3$  et  $y = 7$  dans l'équation donnée, par exemple en reportant  $a = 8$  au lieu de  $a = 3$  dans la dernière ligne.  
Moyenne: 4,3
4. Ce problème a été plutôt bien réussi. De façon générale, les élèves qui ont compris qu'il fallait couper la partie ombrée au moyen d'une droite passant à l'origine (et non pas d'une droite horizontale) n'ont éprouvé aucune difficulté à résoudre ce problème.  
Moyenne: 3,9
5. Un grand nombre d'élèves ont reçu une partie des points pour une liste presque complète de palindrome ou une liste trop longue de palindromes. Bon nombre d'élèves ont commencé par des palindromes et les ont multiplié par 6. Habituellement, cela ne donne pas des palindromes. De plus, les palindromes divisibles par 6 sont omis.  
Moyenne: 2,9
6. On pouvait résoudre ce problème difficile au moyen d'une solution courte qui exigeait beaucoup de perspicacité. Quelques points ont été attribués pour les triplets erronés lorsque les élèves faisaient preuve d'une certaine habileté à manipuler des fractions.  
Moyenne: 0,3

**Partie B**

1. Dans la partie (a), beaucoup d'élèves ont trouvé l'image des points avec succès dans le plan cartésien, sans toutefois répondre à question qui demandait les coordonnées des points  $P$ ,  $R$  et  $S$ . Dans la partie (b), les élèves qui ont compris la question ont bien réussi. Certains ont commis des erreurs en considérant des segments obliques ou en utilisant la figure de la partie (c) et en calculant la longueur d'arcs de cercles. Bon nombre d'élèves ont réussi à déterminer le volume dans la partie (c). Le calcul de l'aire totale s'est avéré plus difficile. Beaucoup d'élèves n'ont pas compris le sens des deux termes de la formule et se sont embrouillés en additionnant ou en soustrayant trop de parties de disques.  
Moyenne: 7,2
2. Bon nombre d'élève ont réussi la partie (a). La partie (b) a été bien réussie, bien que certains élèves ont simplement nommé les tasses qui recevaient une boule. La partie (c) a aussi été bien réussie. Certains élèves ont nommé les tasses qui recevaient une boule, tout en omettant certains numéros. Dans la partie (d), bon nombre d'élèves ont compté la première tasse deux fois pour conclure que la boule continuait sur  $338 \times 8$  tasses après la première, au lieu de  $337 \times 7$  tasses.  
Moyenne: 6,5
3. Bon nombre d'élèves ont réussi les parties (a) et (b). L'erreur la plus fréquente était de calculer les différences entre les nombres adjacents plutôt que celles entre toutes les paires de nombres. Les parties (c) et (d) étaient plus difficiles et exigeaient une plus grande attention.  
Moyenne: 3,2
