The Centre for Education in Mathematics and Computing is pleased to announce the results of the 2014 Canadian Senior and Intermediate Mathematics Contests.

Our congratulations go to all who participated in this year's CSMC and CIMC. This year's Contests were resounding successes, with averages of 32.4 and 37.3, respectively.

As always, we would like to thank the hard-working Problems Committees. Many of the members of these Committees are active secondary school teachers who volunteer their time and contribute dozens of hours of expertise. Without their intriguing and sometimes amusing problems, these Contests would not be possible.

We would also like to thank all participants, both teachers and students. We hope that the papers provided you with some interesting mathematics to think about and play with. Thank you for your support! Please continue to encourage your colleagues and fellow students to become involved in our activities.

Le Centre d'éducation en mathématiques et en informatique a d'annoncer les résultats du Concours canadiens de mathématiques de niveau supérieur et intermédiaire 2014.

Nos félicitations vont à tous les participants du CCMS et du CCMI de cette année. Les Concours de cette année retentissaient de succès, avec des moyennes de 32,4 et 37,3, respectivement.

Nous aimerions surtout remercier les Comités de problèmes pour leur dur travail. Plusieurs membres de ces Comités sont des enseignant(e)s d'école secondaire actifs qui offre leur temps et contribuent des douzaines d'heures d'expertise. Sans leurs problèmes perspicaces et amusants, ces Concours ne seraient pas possibles.

Nous aimerions remercier aussi tous les participants incluant les enseignants et les étudiants. Nous espérons que les concours vous ont offert des mathématiques intéressantes qui vous ont amusées et portées à réfléchir. Merci pour votre soutien continué!

CANADIAN SENIOR MATHEMATICS CONTEST

Part A

1. Very well done. There were few trends among incorrect solutions.  
Average: 4.6
2. Very well done. There were few trends among incorrect solutions.  
Average: 4.4
3. Very well done. Many of the incorrect solutions included an incorrect prime factoring of 5000.  
Average: 4.4
4. This question was fairly well done. However, many students did not understand how to correctly use the given notation. Most students were able to calculate  $f(2) + f(5)$  or  $f(5) + f(8)$  or both but seemed unsure of what to do next.  
Average: 3.1
5. Many students found the solution  $x = 0$  but very few students found the solution  $x = \frac{13}{7}$ . A substantial number of students tried to use incorrect facts such as  $\sqrt[3]{a+b} = \sqrt[3]{a} + \sqrt[3]{b}$ . There were a number of other incorrect statements that lead to invalid simplifications.  
Average: 1.2
6. Quite a few students managed to count the number of colourings in the case where only two colours are used. An organized approach got many students to either 186 (the correct answer), or quite close (192 or 96, due to forgetting to remove any double-counting or forgetting to account for all cases).  
Average: 0.7

Part B

1. This problem was well done. The most common errors were minor algebraic ones.  
Average: 8.2
2. There were many creative solutions to this problem, using a variety of techniques. A common error in part (a)(ii) was to assume that  $a^2 + b^2 = c^2$ , derive the true statement that  $p^2 + q^2 = r^2$  and conclude that therefore  $a^2 + b^2 = c^2$ . For full marks it is necessary to show that the true statement  $p^2 + q^2 = r^2$  leads to the result  $a^2 + b^2 = c^2$ . Common errors in part (b) were to write down a variety of statements without indicating which were given as true and which were the statement that must be proved, and not providing sufficient justification as to why other statements are true.  
Average: 4.8
3. Part (a) was usually quite well done, since students could use trial and error to find the correct value. Trial-and-error was not sufficient as a proof of correctness for parts (b) and (c), even though quite a few students found a pattern by computing the first few values. Justifying the complete set of answers and proving the general form in part (c) required more algebraic reasoning.  
Average: 1.0

CANADIAN INTERMEDIATE MATHEMATICS CONTEST

Part A

1. Very well done. Some students only found the number of children at the beach and did not answer the question to find the number of children swimming.  
Average: 4.7
2. Very well done. Some arithmetic errors kept a few students from getting full marks. The marking team was generally impressed by the algebraic skills that students displayed.  
Average: 4.8
3. This questions was generally well done although many students did not see that  $DR$  was an external height for the  $\triangle PQR$ .  
Average: 4.3
4. This question was well done by students who used an algebraic method. A trial and error solution was generally well done but students did poorly when using a chart. There were many small careless errors in the solutions to this question.  
Average: 4.6
5. This question was fairly well done. When an answer was incorrect, the markers had a difficult time awarding part marks because it was unclear what approach was being used to count golf balls. This would be a great problem to discuss with a class because of the number of different correct ways of solving the problem.  
Average: 2.8
6. This proved to be a very difficult question with only a small number of students getting the correct final answer. Among the "better" incorrect answers, the most common error was to mistake 91 as a prime number.  
Average: 0.8

Part B

1. Part (a) was well done. Part (b) was well done as long as students recognized that the three given algebraic expressions represented the three numbers. Part(c) was generally well done although many students missed that the numbers could be the same.  
Average: 8.4
2. Part (a) was successfully done by many students. Students who did not earn full marks usually found the length of  $PR$  and stopped. They had not answered the question. Part (b) was well either done well or not done at all. Many beautiful algebraic solutions were seen. Students who listed some possible values for  $c$  and did not prove that their solution was the only one possible did not earn full marks.  
Average: 5.8
3. It was nice to see how many students were able to play with Vicky's machine enough to give correct final answers. However, not many students provided justification for their answers. In particular, it was difficult to carefully argue why other answers in parts (b), (c) and (d) did not exist.  
Average: 1.1

**CONCOURS CANADIEN DE NIVEAU SUPÉRIEUR**

**Partie A**

1. Ce problème a été très bien réussi. Il y avait peu de tendances parmi les solutions erronées.  
Moyenne: 4,6
2. Ce problème a été très bien réussi. Il y avait peu de tendances parmi les solutions erronées.  
Moyenne: 4,4
3. Ce problème a été très bien réussi. Bon nombre des solutions incorrectes comportaient une factorisation première incorrecte de 5000.  
Moyenne: 4,4
4. Ce problème a été plutôt bien réussi. Or, bon nombre d'élèves ne savaient pas comment utiliser la notation. La plupart des élèves ont pu calculer  $f(2) + f(5)$  ou  $f(5) + f(8)$  ou les deux, mais ne semblaient pas savoir comment continuer.  
Moyenne: 3,1
5. Bon nombre d'élèves ont trouvé la solution  $x = 0$ , mais peu d'élèves ont trouvé la solution  $x = \frac{13}{7}$ . Un nombre important d'élèves ont tenté d'utiliser de fausses propriétés telles que  $\sqrt[3]{a+b} = \sqrt[3]{a} + \sqrt[3]{b}$ . Un certain nombre d'énoncés incorrects ont aussi produit des simplifications erronées.  
Moyenne: 1,2
6. Bon nombre d'élèves ont réussi à compter le nombre de façons de peindre les casiers lorsque seulement deux couleurs étaient utilisées. Une approche bien planifiée a mené des élèves à une réponse de 186 (la bonne réponse), ou à une réponse proche (192 ou 96, en oubliant de soustraire les cas qui avaient été compté deux fois ou en oubliant de tenir compte de tous les cas).  
Moyenne: 0,7

**Partie B**

1. Ce problème a été bien réussi. Les erreurs les plus communes étaient des erreurs mineures d'algèbre.  
Moyenne: 8,2
2. Les élèves ont fait appel à un nombre de solutions créatives en utilisant une variété d'approches. Dans la partie (a)(ii), bon nombre d'élèves ont commis l'erreur de supposer que  $a^2 + b^2 = c^2$  est vrai pour démontrer que  $p^2 + q^2 = r^2$  est vrai et conclure que  $a^2 + b^2 = c^2$  est vrai. Pour réussir et obtenir le maximum de points, il fallait démontrer qu'à partir de  $p^2 + q^2 = r^2$ , on peut conclure que  $a^2 + b^2 = c^2$ . Dans la partie (b), l'erreur la plus commune était d'écrire une suite d'énoncés sans indiquer ceux qui étaient vrais selon l'énoncé du problème et ceux qui devaient être démontrés ou de ne pas justifier suffisamment pourquoi certains énoncés étaient vrais.  
Moyenne: 4,8
3. La partie (a) a été plutôt bien réussie, car les élèves pouvaient avoir recours à une méthode d'essais systématiques. Cette méthode ne suffisait pas pour démontrer une solution complète dans les parties (b) et (c), même si certains élèves ont découvert une régularité après avoir calculé quelques valeurs. Il fallait recourir à une approche algébrique pour justifier toutes les valeurs entières de l'expression dans la partie (b) ou pour démontrer la forme générale dans la partie (c).  
Moyenne: 1,0

**CONCOURS CANADIEN DE NIVEAU INTERMÉDIAIRE**

**Partie A**

1. Ce problème a été très bien réussi. Certains élèves ont déterminé le nombre de personnes sur la plage sans continuer pour répondre à la question, soit déterminer le nombre d'enfants qui se baignent.  
Moyenne: 4,7
2. Ce problème a été très bien réussi. Quelques élèves ont commis des erreurs de calcul. L'équipe de notation a été impressionnée par les habiletés algébriques des élèves.  
Moyenne: 4,8
3. Ce problème a été plutôt bien réussi. Certains élèves n'ont pas remarqué que  $DR$  était la hauteur extérieure du triangle  $PQR$  correspondant à la base  $PQ$ .  
Moyenne: 4,3
4. Ce problème a été bien réussi par les élèves qui ont utilisé une méthode algébrique. Les élèves qui ont procédé par tâtonnements ont assez bien réussi, tandis que ceux et celles qui ont utilisé un tableau n'ont pas bien réussi. On a remarqué un grand nombre d'erreurs d'inattention.  
Moyenne: 4,6
5. Ce problème a été plutôt bien réussi. On a éprouvé des difficultés à attribuer une partie des points lorsqu'une réponse était incorrecte, car la méthode utilisée pour compter les balles était rarement claire. Ce problème est un bon problème à présenter en classe à cause des nombreuses façons disponibles pour le résoudre.  
Moyenne: 2,8
6. Le problème s'est avéré très difficile. Seuls quelques élèves ont obtenu la bonne réponse. Parmi les « meilleures » réponses erronées, l'erreur la plus fréquente découlait d'avoir pris 91 pour un nombre premier.  
Moyenne: 0,8

**Partie B**

1. La partie (a) a été bien réussie. La partie (b) a été bien réussie lorsque les élèves ont reconnu que les trois expressions algébriques représentaient les trois nombres. La partie (c) a été assez bien réussie, bien que bon nombre d'élèves n'ont pas compris que les nombres pouvaient être les mêmes.  
Moyenne: 8,4
2. Bon nombre d'élèves ont réussi la partie (a). Les élèves qui n'ont pas obtenu le maximum de points se sont généralement arrêtés après avoir déterminé la longueur de  $PR$ , sans répondre à la question. La partie (b) a été bien réussie par certains et pas du tout par les autres. On a remarqué un bon nombre de solutions algébriques élégantes. Les élèves qui ont obtenu quelques valeurs possibles de  $c$ , sans démontrer que leur solution était la seule valeur possible, n'ont pas reçu le maximum de points.  
Moyenne: 5,8
3. Il fait bon de voir que bon nombre d'élèves ont réussi à jouer suffisamment avec la machine de Véro pour trouver des réponses correctes. Or, peu d'élèves ont justifié leurs réponses. De façon particulière, il était difficile de présenter une raison pour laquelle d'autres réponses étaient impossibles dans les parties (b), (c) et (d).  
Moyenne: 1,1
