 Darren Luoma, Bear Creek S.S., Barrie, ON
 Alex Pintilie, Crescent School, Toronto, ON
 David Pritchard, Princeton University, Princeton, NJ
 Ross Willard, University of Waterloo, Waterloo, ON

Overall Comments

Congratulations to all of the participants in the 2014 Euclid Contest. The average score in 2014 was 48.1. We were very pleased that almost all students achieved some success on the early parts of the paper. At the same time, the later parts of these problems managed to challenge the top students even more than last year's problems. Special congratulations go to the 33 official contestants who achieved scores of 90 and higher this year.

We at the Centre for Education in Mathematics and Computing believe strongly that it is very important for students to both learn to solve mathematics problems and learn to write good solutions to these problems. Many students do a reasonable job of writing solutions, while others still include no explanation whatsoever.

Special thanks go to the Euclid Committee that annually sets the Contest problems and manages to achieve a very difficult balancing act of providing both accessible and challenging problems on the same paper.

To the students who wrote, the parents who supported them, and the teachers who helped them along the way, thank you for your continuing participation and support. We hope that you enjoyed the Contest and relished the challenges that it provided. We hope that mathematics contests continue to feed your love for and interest in mathematics.

Specific Comments

1. Average: 9.3

This question was well done. A few students did not remember that $\sqrt{16}$, for example, has only one value.

2. Average: 9.0

Part (a) was well done. A common error was not to include the diameter in the perimeter of the region. Parts (b) and (c) were very well done.

3. Average: 8.0

Part (a) was quite well done. Part (b) was fairly well done. Many students began correctly using an algebraic solution, however did not factor or show the factors of the resulting cubic equation to determine the roots.

4. Average: 5.9

Part (a) was fairly well done. A number of students gave an answer that suggested that they had missed one or two of the positive divisors. Some students did not answer the question that was asked. In part (b), many students equated two incorrect lengths ($AB = BC$ or $AC = BC$). Using either the correct equality or one of the incorrect ones, students had little difficulty solving the equations that resulted.

5. Average: 4.5

This problem was generally well done. In part (a), most students were able to determine the total amount of acid in the three bottles and the amount of acid in the first mixture. Some had difficulty determining what to do with this information. A fair number of students achieved 6 or 7 marks (out of 7) on part (b), with the majority completing the square in some fashion. Many students did not sufficiently justify why their result was the minimum.

6. Average: 3.6

In part (a), a number of students did not know where to begin. Some worked with an equation like $\frac{x}{40} \cdot \frac{x}{40} = \frac{5}{12}$ or $\frac{x}{40} + \frac{x-1}{39} = \frac{5}{12}$. In part (b), a majority of the students obtained a correct answer by pairing terms, but did not discuss the possibility of n being even or odd; more reasoning was necessary when using this approach. A good number of the students who developed two equations in terms of two unknowns were able to proceed with a correct algebraic solution.

7. Average: 3.7

Many students identified the correct answer to part (a) by inspection. An algebraic approach, without substitution, was often abandoned. A majority of students identified one of the two solutions in part (b) through inspection (with or without an initial substitution). A common mistake made with a correct algebraic approach was not including both the values $\log_{10}(\log_{10} x) = 2$ and $\log_{10}(\log_{10} x) = -2$. A fair number of students incorrectly applied the power law of logarithms on the first step, to obtain $\log_{10}(\log_{10} x) \log_{10} x = 10000$.

8. Average: 3.4

There were many interesting approaches to part (a), including solutions involving finding similar triangles, placing a coordinate system with the x -axis parallel to BC , extending line segments AD and BC until they meet, etc. Part (b) was generally more difficult than part (a). Many students saw at least one pair of congruent triangles, and most of those students saw another pair of congruent triangles. The part that was crucially missing in quite a few student solutions was looking at the $\angle MCN$ by breaking it up into smaller angles.

9. Average: 0.4

Of the small number students who attempted part (a), a few realized that $\sin(45^\circ)$ was a crucial number, and that separating the related term allowed the pairing of terms to move closer to the solution. Generally, this problem was very tricky for students, since it involved thinking of the sequence using both trigonometric identities (like $\sin(\theta) = \cos(90^\circ - \theta)$) and also some algebraic manipulation (like the factorization of $x^3 + y^3$). Part (b) was extremely demanding. Many students misinterpreted the problem and ignored the constraint that the sum of the digits was 5, or that the integers had n digits. This question had very few attempted solutions.

10. Average: 0.3

Part (a) had the most success of any part in problems 9 and 10, since many students could reverse the process by applying moves of various types in “reverse”. Parts (b) and (c) both required very intricate solutions, since there are many components that require a large degree of care.

Please visit our website at www.cemc.uwaterloo.ca to download the 2014 Euclid Contest, plus full solutions.

Commentaires Généraux

Félicitations à tous les participants du Concours Euclide 2014. La note moyenne était 48,1. Nous avons eu le plaisir de constater que presque tous les élèves ont eu du succès dans les premières questions. De plus, les dernières parties de ces problèmes présentaient un plus grand défi pour les meilleurs étudiants que l'année dernière. Des félicitations spéciales vont aux trente-trois concurrents officiels qui ont atteint une note supérieure ou égale à 90 sur 100.

Le Centre d'éducation en mathématiques et en informatique croit fortement qu'il est très important pour les étudiant(e)s d'apprendre à résoudre des problèmes de mathématiques ainsi que d'apprendre à écrire de bonnes solutions à ces problèmes. Plusieurs étudiants développent leurs solutions raisonnablement bien, tandis que d'autres n'incluent aucune explication avec leurs réponses.

Un grand merci va au comité du concours Euclide qui rassemble annuellement les problèmes du concours et réussit à accomplir la tâche difficile de concevoir des problèmes accessibles et stimulants sur le même examen.

Un grand merci aux étudiant(e)s qui ont écrit, aux parents qui les ont soutenus et aux enseignant(e)s qui les ont aidés pour votre participation continue et votre soutien. Nous espérons que vous avez apprécié le concours et savouré les défis qu'il a présentés. Nous espérons que les concours de mathématiques continuent à nourrir votre amour et intérêt pour les mathématiques.

Remarques particulières

1. Moyenne: 9,3

Cette question a été bien réussie. Quelques élèves ne se souvenaient pas que $\sqrt{16}$, par exemple, n'admet qu'une valeur.

2. Moyenne: 9,0

La partie (a) a été bien réussie. Assez souvent, les élèves ont omis le diamètre dans le calcul du périmètre du demi-disque. Les parties (b) et (c) ont été très bien réussies.

3. Moyenne: 8,0

La partie (a) a été bien réussie. La partie (b) a été assez bien réussie. Bon nombre d'élèves ont procédé correctement pour simplifier l'équation, mais n'ont pas factorisé le polynôme du troisième degré pour déterminer les racines de l'équation qui en résultait.

4. Moyenne: 5,9

La partie (a) a été assez bien réussie. Certaines réponses indiquaient que les élèves avaient omis un ou deux des diviseurs positifs. Certains élèves ont répondu à côté du sujet. Dans la partie (b), bon nombre d'élèves ont mal choisi les longueurs égales (en choisissant $AB = BC$ ou $AC = BC$). Dans tous les cas, les élèves n'ont éprouvé aucune difficulté à résoudre l'équation qui en résultait.

5. Moyenne: 4,5

Cette question a été assez bien réussie. Dans la partie (a), la plupart des élèves ont réussi à déterminer la quantité d'acide dans chacune des trois bouteilles ainsi que la quantité d'acide dans le mélange initial. Certains ne savaient pas comment utiliser ces résultats. Bon nombre d'élèves ont obtenu 6 ou 7 points (sur 7) dans la partie (b). La majorité d'entre eux ont complété le carré d'une façon ou d'une autre. Bon nombre d'entre eux n'ont pas suffisamment justifié pourquoi la valeur était la plus petite valeur possible.

6. Moyenne: 3,6

Dans la partie (a), certains élèves ne savaient pas comment commencer. Certains ont utilisé une équation telle que $\frac{x}{40} \cdot \frac{x}{40} = \frac{5}{12}$ ou $\frac{x}{40} + \frac{x-1}{39} = \frac{5}{12}$. Dans la partie (b), la majorité des élèves ont obtenu la bonne réponse en appariant des termes deux à deux, sans considérer si n était pair ou impair. Cette approche

exigeait un raisonnement plus poussé. Bon nombre d'élèves ont développé un système de deux équations à deux inconnues et ont réussi à obtenir la réponse en procédant correctement.

7. Moyenne: 3,7

Bon nombre d'élèves ont trouvé la réponse de la partie (a) par inspection. D'autres ont tenté de résoudre l'équation de façon algébrique sans substitution, tout en abandonnant en chemin. La majorité des élèves ont obtenu une des deux racines dans la partie (b) par inspection (avec ou sans substitution au départ). Assez souvent, les élèves qui ont bien utilisé une approche algébrique n'ont pas utilisé les deux valeurs $\log_{10}(\log_{10} x) = 2$ and $\log_{10}(\log_{10} x) = -2$. Bon nombre d'élèves ont utilisé de façon incorrecte la loi des puissances pour les logarithmes, au départ, obtenant ainsi $\log_{10}(\log_{10} x) \log_{10} x = 10000$.

8. Moyenne: 3,4

Dans la partie (a), les élèves ont utilisé une variété intéressante d'approches, comme l'utilisation de triangles semblables, l'utilisation d'un repère cartésien avec l'axe des abscisses parallèle à BC , le prolongement des segments AD et BC jusqu'à ce qu'ils se coupent, etc. La partie (b) était plus difficile que la partie (a). La plupart des élèves ont repéré deux triangles isométriques et la plupart d'entre eux en ont trouvé deux autres. Bon nombre d'élèves n'ont pas considéré l'angle MCN en le coupant en deux parties, ce qui était essentiel.

9. Moyenne: 0,4

Très peu d'élèves ont tenté de résoudre la partie (a). Parmi eux, quelques-uns ont constaté l'importance du terme $\sin^6(45^\circ)$ qui permettait d'apparier les autres termes deux à deux pour continuer la solution. Ce problème était exigeant, car il fallait traiter le membre de gauche en considérant son aspect trigonométrique (p. ex., $\sin(\theta) = \cos(90^\circ - \theta)$) ainsi que son aspect algébrique (comme la factorisation de $x^3 + y^3$). La partie (b) était aussi très exigeante. Bon nombre d'élèves ont omis la contrainte voulant que les entiers aient des chiffres qui ont une somme de 5 ou celle voulant que les entiers aient n chiffres. Très peu d'élèves ont présenté une tentative de solution.

10. Moyenne: 0,3

Les élèves ont connu un plus grand succès dans la partie (a) que dans toute autre partie des numéros 9 et 10, car ils ont réussi à procéder correctement en travaillant à rebours. Les parties (b) et (c) exigeaient des solutions complexes, car elles avaient plusieurs composantes où il fallait procéder avec soin.

Veillez visiter notre site Web à www.cemc.uwaterloo.ca pour télécharger le Concours Euclide 2014, avec solutions complètes.

STUDENTS / ÉLÈVES

Students are listed in alphabetical order. / Les élèves sont nommés en ordre alphabétique.
