### Overall Comments

The year 2014 marked the twelfth writings of the Fryer, Galois and Hypatia Contests. The FGH Contests are designed to give students in Grades 9, 10 and 11 an additional mathematical challenge during the school year, and one that requires full written solutions. Being able to do mathematics is an important skill; being able to communicate one's findings (in mathematics or in any other field) is also very important.

We were very pleased this year to see another healthy increase in the number of participants in these Contests. In general, many students writing these Contests are doing a better job each year of writing clear solutions to the problems. That being said, there is always work that can be done to help them improve these skills. Some students reduced their scores because they gave answers rather than solutions or presented untidy or illegible solutions.

The averages on the Fryer, Galois and Hypatia Contests this year were 22.7, 24.0 and 26.1, respectively. We will continue to try to keep the averages on these papers in this range. Here are some specific comments on the problems.

### Fryer Contest

1. Average: 6.0

This problem was not particularly well done for a problem 1. In parts (a) and (b), many students had trouble counting the number of 2- and 3-digit numbers (for example, saying that there are 89 numbers in the list 10 to 99). Mistakes in (a) and (b) left to troubles calculating the answer to part (c).

2. Average: 8.3

This question was very well done. In part (c), some solutions were not very well written, but our markers were generous here. Part (d) was poorly done by some students who used the diagram from part (c) and made inferences based on that diagram.

3. Average: 5.6

This question required careful marking due to the amount of reading needed as the game strategies were discussed. In both parts (b) and (c), many students did not discuss what happens when the point moves on to the  $y$ -axis.

4. Average: 2.7

This problem was the hardest problem on this paper and required the most care. In part (a), the fact that two subsets had a sum of 3 was often missed, and many students were confused and added the sum of the sums up to get 24. In part (b), full marks were given for a well-defined list of sets, their sums and the total sum. Many students only looked at one- and two-element sets to get an answer of 75 or looked at 1-, 2- and 5-element sets to get 90 (missing the 3- and 4-element sets). Students who had success in part (c) tended to use remainders, modular arithmetic or brute force.

### Galois Contest

1. Average: 8.0

This question was very well done. In part (d), the biggest difficulty was misreading the question and answering how many medals were added to the trophy case.

2. Average: 7.2

Parts (a) and (b) were well done. In part (c), most students came to a conclusion in a way similar to that in the posted solution. However, some students chose to solve a system of equations to come up with a contradiction. In part (d), the most common mistake was not checking all cases. Many students only checked one case and would state that \$142 must come from  $5 \times \$20 + 6 \times \$7$ . We saw alternate solutions to this question that solved the problem by examining the units digit of 142.

3. Average: 6.2

Parts (a) and (b) were very well done. Part (c) was done fairly well; however, when mistakes were made

there was often very little or no work for the markers to grade. Part (d) was not done as well as the earlier parts. Students who made a good attempt at the problem but were not able to find all four solutions often had two of the four solutions and were just missing one piece of the argument. They would often only find the solutions when one lets  $a$  be as small as possible (67 and 68), or the two solutions when  $S$  is even (68, 84) or when  $S$  is odd (67, 85).

4. Average: 2.5

Part (a) was well done. In part (b), the most common mistake was to incorrectly assume that the centres of the circles are collinear. We did see some students make this mistake in part (b), but not in part (c). These students were still able to make a reasonable attempt part (c). A common mistake in part (c) was assuming that the points of tangency are collinear and that the line through these points is horizontal.

### Hypatia Contest

1. Average: 8.7

This problem was well done. In (d), the most common error was to determine only one of the two solutions,  $k = 0$  and  $k = 5$ , often because of using a trial and error solution, or by “crossing out” a  $k$  from both sides of the equation  $k^2 = 5k$  to get  $k = 5$  (thus missing the possibility that  $k = 0$ ).

2. Average: 8.2

This question was well done. In (c), students were expected to justify their answers for the last week the song was in the top 200. That could be done by graphing or describing the parabola, or comparing the values of  $P(14)$  and  $P(15)$ .

3. Average: 6.5

Part (a) was well done. Many students approached (b) and (c) by adding points to the diagram and calculating some resulting lengths of line segments. Typical errors included constructions that were not well-explained, or assumptions made about angles and ratios of resulting constructions.

4. Average: 2.7

Part (a) was well done. In (b), many students examined the area of one or two specific triangles, rather than using a general expression for side lengths  $x, y, z$ . In (c), some students missed the requirements that  $x > 1$  and  $y > 1$ .

**Please visit our website at [www.cemc.uwaterloo.ca](http://www.cemc.uwaterloo.ca) to download the 2014 Fryer, Galois and Hypatia Contests, plus full solutions.**

### Commentaires généraux

L'année 2014 est la douzième édition des concours Fryer, Galois et Hypatie. Les concours de FGH ont été créés pour donner aux étudiants de 9e, 10e et 11e année (sec. III, IV et V) un défi mathématique supplémentaire pendant l'année scolaire qui exige des solutions écrites complètes. Être capable de faire des mathématiques est une aptitude importante. Pouvoir communiquer ses conclusions (en mathématiques ou autres domaines) est aussi très important.

Nous sommes ravis cette année de constater une croissance du nombre de participants à ces concours. En général, plusieurs des étudiants participant à ces concours s'améliorent d'année en année en ce qui concerne écrire des solutions claires. Cependant, il y a toujours du travail à faire pour les aider à développer leurs aptitudes. Certains des étudiants ont eu des notes plus basses car ils présentaient uniquement des réponses au lieu de solutions ou des solutions non soignées ou illisibles.

Cette année, les moyennes des concours Fryer, Galois et Hypatie étaient de 22,7, 24,0 et 26,1 respectivement. Nous tenterons de continuer à conserver cette gamme pour les moyennes de ces examens. Voici quelques commentaires spécifiques sur les problèmes de ces examens.

### Concours Fryer

#### 1. Moyenne: 6,0

Tenant compte qu'il s'agit d'une question 1, ce problème n'a pas été tellement bien réussi. Dans les parties (a) et (b), bon nombre d'élèves ont éprouvé de la difficulté à compter le nombre de nombres de 2 ou 3 chiffres (par exemple en disant qu'il y avait 89 entiers de 10 à 99). Ces erreurs dans les parties (a) et (b) ont mené à des difficultés dans la partie (c).

#### 2. Moyenne: 8,3

Cette question a été très bien réussie. Dans la partie (c), certaines solutions manquaient de rigueur, mais on a accordé le bénéfice du doute. Certains élèves ont utilisé la figure de la partie (c) pour résoudre la partie (d), tout en utilisant à tort des propriétés de cette figure.

#### 3. Moyenne: 5,6

La notation de cette question exigeait beaucoup de soin, à cause des stratégies décrites par les élèves. Dans les parties (b) et (c), bon nombre d'élèves n'ont pas discuté de ce qui arrive lorsque le point se meut sur l'axe des ordonnées.

#### 4. Moyenne: 2,7

Ce problème était le plus difficile et il exigeait beaucoup d'attention. Dans la partie (a), bon nombre d'élèves n'ont pas vu que deux sous-ensembles avaient une somme de 3. D'autres ont additionné les sommes pour obtenir une réponse de 24. Dans la partie (b), on a accordé le maximum de points à ceux qui ont donné une liste de sous-ensembles, leur somme et la somme des sous-ensembles. Bon nombre d'élèves n'ont examiné que les sous-ensembles de 1 ou 2 éléments pour obtenir une somme de 75. D'autres n'ont examiné que les sous-ensembles de 1, 2 ou 5 éléments pour obtenir une somme de 90 (oubliant les sous-ensembles de 3 ou 4 éléments). Ceux qui ont connu du succès dans la partie (c) ont utilisé des restes, l'arithmétique modulaire ou beaucoup de persévérance.

### Concours Galois

#### 1. Moyenne: 8,0

Cette question a été très bien réussie. Dans la partie (d), bon nombre d'élèves ont mal lu la question et ont répondu en donnant le nombre de médailles qui ont été ajoutées.

#### 2. Moyenne: 7,2

Les parties (a) et (b) ont été bien réussies. Dans la partie (c), la plupart des élèves ont donné une solution semblable à celle publiée dans les Solutions du concours. Certains élèves ont utilisé un système d'équations

pour obtenir une contradiction. Dans la partie (d), beaucoup d'élèves n'ont pas considéré tous les cas possibles. Bon nombre d'entre eux n'ont considéré qu'un cas, affirmant que  $142\$$  doit provenir de  $5 \times 20\$ + 6 \times 7\$$ . Certains élèves ont résolu le problème en examinant le chiffre des unités du nombre 142.

3. Moyenne: 6,2

Les parties (a) et (b) ont été très bien réussies. La partie (c) a été assez bien réussie. Les solutions erronées laissaient peu de traces et il était difficile de leur attribuer des points. La partie (d) n'a pas été aussi bien réussie. Bon nombre d'élèves ont pris une approche prometteuse, tout en n'obtenant que deux des quatre réponses. Par exemple, ils ont obtenu les réponses 67 et 68 lorsque  $a$  prend une valeur minimale, les réponses 68 et 84 lorsque  $S$  est pair ou les réponses 67 et 85 lorsque  $S$  est impair.

4. Moyenne: 2,5

La partie (a) a été bien réussie. Dans la partie (b), bon nombre d'élèves ont supposé, à tort, que les centres des cercles étaient alignés. Ces mêmes élèves n'ont pas commis cette erreur dans la partie (c) où ils ont réussi à présenter un travail raisonnable. Dans la partie (c), bon nombre d'élèves ont supposé, à tort, que la droite qui contient les deux points de contact est horizontale.

### Concours Hypatie

1. Moyenne: 8,7

Cette question a été bien réussie. Dans la partie (d), bon nombre d'élèves n'ont obtenu qu'une des deux réponses,  $k = 0$  et  $k = 5$ , en utilisant une approche par tâtonnements ou en éliminant  $k$  de chaque membre de l'équation  $k^2 = 5k$  pour obtenir  $k = 5$  (ce qui élimine la possibilité que  $k = 0$ ).

2. Moyenne: 8,2

Cette question a été bien réussie. Dans la partie (c), les élèves devaient justifier leur choix de la dernière semaine où la chanson paraissait sur la liste des 200 chansons les plus populaires. Ils pouvaient le faire en traçant ou en décrivant la parabole ou en comparant les valeurs de  $P(14)$  et  $P(15)$ .

3. Moyenne: 6,5

La partie (a) a été bien réussie. Dans les parties (b) et (c), beaucoup d'élèves ont ajouté des points à la figure et ont calculé la longueur des nouveaux segments de droites. Certaines constructions n'étaient pas bien expliquées et certains élèves ont attribué des propriétés à des angles ou à des rapports sans justification.

4. Moyenne: 2,7

La partie (a) a été bien réussie. Dans la partie (b), bon nombre d'élèves ont examiné l'aire d'un ou deux triangles, plutôt que d'utiliser une expression pour l'aire en fonction de  $x$ ,  $y$  et  $z$ . Dans la partie (c), certains élèves n'ont pas tenu compte des restrictions  $x > 1$  et  $y > 1$ .
