Exercises I

1. By rearranging Ohm’s Law or using the Equation Pyramid, write the equations for:

\[ V = I \times R \quad \text{\quad} \quad I = \frac{V}{R} \quad \text{\quad} \quad R = \frac{V}{I} \]

2. What is the voltage given off by a circuit where there is a current of 40 amperes, and a resistance of 2 ohms.

\[ V = I \times R \]
\[ V = 40A \times 2\Omega \]
\[ V = 80V \]

3. A circuit has a total resistance of 3 ohms and ends up giving a voltage of 18 volts. What is the current in the circuit?

\[ I = \frac{V}{R} \]
\[ I = \frac{18V}{3\Omega} \]
\[ I = 6V \]

4. If a circuit gives off 120 volts of energy and it is found that there is a current of 40 amperes, what is the total amount of resistance in the circuit?

\[ R = \frac{V}{I} \]
\[ R = \frac{120V}{40A} \]
\[ R = 3\Omega \]
