

Problem of the Week

Problem A

Jasmine's Loot Bags

Jasmine is making loot bags of candy for 12 friends coming to her birthday party. She buys 60 gooey bears, 93 fluffy peaches and 75 jelly beans.

In order to be fair, Jasmine would like to put the same number of each candy into each of the 12 bags. She wants to give everyone as much candy as possible.

How many of each candy will be in one friend's loot bag?
