

Problem of the Week

Problem B

My How You've Grown, eh?

In 1970, the population of Canada was estimated at 21.32 million people. In 2010, the population was estimated to be 34.01 million.

- If Canada continues to grow at the same rate as this data predicts, what will be its population in 2030?
- If this rate of growth persists, when will Canada reach a population of 50 million?
