# Problem of the Week <br> Problem E <br> Diagonal Distance 

Square $A B C D$ has $K$ on $B C, L$ on $D C, M$ on $A D$, and $N$ on $A B$ such that $K L M N$ forms a rectangle, $\triangle A M N$ and $\triangle L K C$ are congruent isosceles triangles, and also $\triangle M D L$ and $\triangle B N K$ are congruent isosceles triangles. If the total area of the four triangles is $50 \mathrm{~cm}^{2}$, what is the length of $M K$ ?
