Foundations and Pre-Calculus 10

The table below lists the correspondence between general outcomes of the British Columbia Foundations and Pre-Calculus 10 (MFMP10) curriculum and the CEMC Grade 9/10/11 courseware.

Each section of the table is labelled with a dark heading containing an MFMP10 general outcome. The left-hand entries in a section are corresponding CEMC Grade 9/10/11 courseware strands and units. The right-hand side entries are all relevant courseware lessons within this courseware strand and unit.

The CEMC Grade 9/10/11 courseware has been designed with curricula from across Canada in mind. It is not an exact match to the current curriculum in any specific jurisdiction. In order to help teachers and students determine any discrepancies relevant to them, the table below also includes all of the courseware lesson goals for any cited courseware lesson. Additionally, some italicized notes point out topics that are not covered by the courseware or covered in an earlier or later part of the CEMC courseware suite.

### Linear Relations and Analytic Geometry
#### Unit 2: Characteristics of Linear Relations

**Lesson 2: Function Notation**
- Describe functions using function notation.
- Analyze linear functions using function notation.
- Analyze quadratic functions using function notation.

*(Parts of this lesson may be beyond the scope of this course.)*

**Lesson 3: Domain and Range**
- Determine the domain and range of a function containing only a few points.
- Use set notation to describe the domain and range of a given function.
- Determine the domain and range of quadratic functions.

*(Parts of this lesson may be beyond the scope of this course.)*

### Linear Functions: Slope and equations of lines

**Linear Relations and Analytic Geometry**

#### Unit 4: Properties of Slope

**Lesson 4: Slope and the y-intercept**
- Define the terms y-intercept and slope.
- Identify or calculate the y-intercept and slope of a linear relation given a graph, table of values, or an equation.
- Explore linear families.

**Lesson 1: The Slope Formula**
- Develop the slope formula for a linear relation.
- Use the slope formula to answer questions about a given linear relation.

**Lesson 2: Working with \(y=mx+b\)**
- Determine algebraically the equation of a line in the form \(y=mx+b\).

**Lesson 3: Parallel and Perpendicular Lines**
- Investigate the properties of slope for both parallel and perpendicular lines.
- Using the properties of slope, solve problems involving parallel and perpendicular lines.

**Lesson 4: Horizontal and Vertical Lines**
- Investigate the properties of slope for both horizontal and vertical lines.
- Using the properties of slope, solve problems involving horizontal and vertical lines.

**Lesson 1: Alternate Forms of an Equation of a Line**
- Identify various forms of an equation of a line.
- Rearrange a given equation of a line from one form to another.
- Solve problems involving the various forms of an equation of a line.

**Lesson 3: Applications of Linear Relations**
- Solve problems involving linear relations represented in different forms.
- Determine a point of intersection graphically, and explain the meaning within a given context.
- Identify and explain restrictions on variables within a given context.

**Lesson 2: Connecting Various Forms of a Linear Relation**
- Identify equivalent representations of a linear relation.
- Connect the table, graph, and equation of a linear relation using the slope and y-intercept.
## Arithmetic Sequences

**Lesson 1: Arithmetic Sequences**
- Identify if a sequence is arithmetic.
- Determine a recursive formula for an arithmetic sequence.
- Determine the general term of an arithmetic sequence.
- Solve questions about arithmetic sequences using the general term.

**Lesson 5: Arithmetic Series**
- Define a series as the sum of the terms of a sequence.
- Derive two formulas for the sum of the first n terms of an arithmetic series.
- Solve problems using the formulas for the sum of the first n terms of an arithmetic series.

## Systems of Linear Equations

**Lesson 1: Solving Linear Systems of Equations Graphically**
- Define systems of equations and understand what it means to “solve” one.
- Identify the various ways a system of two linear equations can intersect.
- Solve linear systems of equations involving two variables graphically.

**Lesson 2: Solving Systems of Equations Algebraically**
- Solve systems of two equations involving two variables using substitution.
- Solve systems of two equations involving two variables using elimination.
- Understand the result when algebraic methods are used to solve linear systems with no solution or systems with infinite solutions.

**Lesson 3: Applications of Linear Systems**
- Given a description in words, create a linear system of equations to model the scenario.
- Solve a linear system to answer a problem using a variety of methods and interpret the meaning of the solution within the given context.

## Multiplication of Polynomial Expressions

**Lesson 3: Multiplying a Polynomial by a Monomial**
- Multiply a polynomial by a monomial using the distributive property.

**Lesson 4: Multiplying a Polynomial by a Polynomial**
- Apply the distributive property to multiply a polynomial by a polynomial.

**Lesson 1: Expanding and Simplifying**
- Review the distributive property in the context of quadratic relations.
- Expand an expression by multiplying or squaring binomials.
- Expand and simplify equations of quadratic relations so that they are in standard form.
- Extend the distributive property beyond multiplying two binomials.

(Parts of this lesson may be beyond the scope of this course.)
### Polynomial Factoring

#### Quadratic Relations

**Unit 3: Algebraic Skills**

**Lesson 2: Factoring – Common and Trinomials**
- Factor an expression using common factoring.
- Factor a trinomial of the form $x^2+bx+c$.
- Factor a trinomial of the form $ax^2+bx+c$ with $a \neq 1$ by decomposition or by inspection.

*(Parts of this lesson may be beyond the scope of this course.)*

**Lesson 3: Factoring – Difference of Squares and Perfect Squares**
- Factor differences of squares.
- Factor perfect squares.
- Determine which type of factoring applies to a given expression.
- Factor expressions requiring more than one type of factoring.

*(Parts of this lesson may be beyond the scope of this course.)*

### Primary Trigonometric Ratios

**Measurement, Geometry, and Trigonometry**

**Unit 3: Trigonometry**

**Lesson 3: Tangent Ratio**
- Compute the tangent ratio for an acute angle in a right-angled triangle given the side lengths.
- Use the tangent ratio to solve for an unknown side length in a right-angled triangle.
- Use the inverse tangent operation on your calculator to solve for an interior angle in a right-angled triangle.

**Lesson 4: Sine and Cosine Ratios**
- Compute the sine and cosine ratio for an acute angle in a right-angled triangle given the side lengths.
- Solve for an unknown side length in a right-angled triangle using the sine or cosine ratio.
- Solve for an interior angle in a right-angled triangle using the inverse sine and cosine operations on your calculator.

### Financial Literacy: Gross and Net Pay

**Sequences, Series, and Financial Literacy**

**Unit 2: Arithmetic and Geometric Sequences and Series and Financial Literacy**

**Lesson 9: Other Financial Topics**
- Define different types of employment income (i.e., salary, hourly wages, commission and piece rates) and make calculations relating to each of these.
- Identify common Canadian deductions (such as income tax, EI, and CPP), calculate the amounts of these deductions based on earnings, and calculate net pay.
- Compare the advantages and disadvantages of buying, renting, or leasing for major expenses such as housing and vehicles.

*(Parts of this lesson may be beyond the scope of this course.)*
