Problem of the Week
Problem C
Two Numbers In

The POTW Input/Output Machine takes a number as input and adds 10 to the number. The machine then takes this sum and multiplies it by 2. Finally, the machine takes this product, subtracts 30 from the number, and outputs this new number.

Anala and Mei each input a positive integer into the machine. If the sum of their two outputs is 130, how many possibilities are there for the positive integer that Anala input into the machine?
