 David Pritchard, Los Angeles, CA
 Peter Wood, University of Waterloo, Waterloo, ON

Overall Comments

Congratulations to all of the participants in the 2016 Euclid Contest. The average score in 2016 was 52.7. We were very pleased that almost all students achieved some success on the early parts of the paper. At the same time, the later parts of these problems managed to challenge the top students even more than last year's problems. Special congratulations go to the 96 official contestants who achieved scores of 90 and higher this year.

We at the Centre for Education in Mathematics and Computing believe strongly that it is very important for students to both learn to solve mathematics problems and learn to write good solutions to these problems. Many students do a reasonable job of writing solutions, while others still include no explanation whatsoever.

Special thanks go to the Euclid Committee that annually sets the Contest problems and manages to achieve a very difficult balancing act of providing both accessible and challenging problems on the same paper.

To the students who wrote, the parents who supported them, and the teachers who helped them along the way, thank you for your continuing participation and support. We hope that you enjoyed the Contest and relished the challenges that it provided. We hope that mathematics contests continue to feed your love for and interest in mathematics.

Specific Comments

1. Average: 9.5

This question was very well done.

2. Average: 9.4

This question was very well done.

3. Average: 7.6

Part (a) was done well. Part (b) was fairly well done. Some students counted fewer than the eighteen 9s or missed the one 8 in the subtraction. Part (c) was fairly well done. Some students missed the fact that the y -coordinate of the vertex of the parabola is negative because it is below the x -axis.

4. Average: 7.0

Part (a) was well done. In part (b), students presented a variety of solutions that showed that the difference in areas is exactly 15 cm^2 . The best of these solutions avoided any kind of decimal approximation.

5. Average: 6.3

Many students did well in part (a). The most common error was not converting the percentages in the question to equivalent decimals. In part (b), the approaches to solutions were equally divided between Solutions 1 and 2. With both approaches, the most common omission was skipping cases or jumping to an equation without justification.

6. Average: 4.9

In part (a), students seemed to either have the correct answer, or did not know where to begin. A lot of students in the latter group unsuccessfully attempted to solve the problem using logarithms. Some students were able to determine the value of y , but did not give the value of x . Part (b) was generally well done. Most students proceeded using Solution 1. Missing one of the cases was the most common mistake made by students using this approach. In Solution 2, some students would claim that the required triangles must be similar to the 3-4-5 triangle, but failed to justify why.

7. Average: 3.7

Students found part (a) to be very challenging. Students often did not define variables or explain what their equations represented, making the allocation of partial marks difficult. Part (b) was generally well done. The most common mistake was not considering the more straightforward cases when $x = 0$ and/or $y = 0$.

8. Average: 2.9

In part (a), students tried a variety of constructions, most often extending two lines and viewing the quadrilateral as the difference of two right triangles. Many students recognized that you could divide the quadrilateral in many different ways: for example, using triangles, a rectangle, a trapezoid. Most students were able to calculate a new length correctly using similar triangles. Many students interpreted the question as asking for the area of the parallelogram instead. A large number of students used rounded decimals instead of exact numbers. In part (b), the main road block seemed to be whether the student knew how to deal with the “reciprocal of the variable”. The need for a change of base in the logarithm wasn’t obvious to a large number of students.

9. Average: 1.1

Both parts of this problem were quite difficult and students did not have much success. In part (a), a reasonable number of students attempted factorial or “ $\binom{n}{k}$ ” counting arguments with no success. Many students were able to count the number of strings with at least one *ABBA* but failed to account for the cases with two and three copies of *ABBA*. A few students successfully counted the number of strings directly (generally using recursion) instead of counting the complement. For 9(b), students used a variety of successful constructions: rotating triangles to the outside of the square, folding triangle inwardly, extending perpendicular lines to the diagonal. Students who displayed a meaningful construction usually received 4 or 5 out of the 5 available marks.

10. Average: 0.3

Most students who attempted (a) calculated the probability using a table or by writing out pairs. Most students got 1 out of the 2 available marks for a good attempt with some missed cases or double counting. A reasonable number of students got the denominator wrong (but in this case they also got the numerator wrong). Some students came up with the function $2n - 1$, along with some mention of primes, in part (b), but didn’t fully justify the result. Very few students attempted part (c). Most successful solutions used powers of 2 or products of distinct primes. A few students came up with exact formulas for $P(N)$ for a particular class of numbers.

Please visit our website at cemc.uwaterloo.ca to download the 2016 Euclid Contest, plus full solutions.

Commentaires Généraux

Félicitations à tous les participants du Concours Euclide 2016. La note moyenne était 52,7. Nous avons eu le plaisir de constater que presque tous les élèves ont eu du succès dans les premières questions. De plus, les dernières parties de ces problèmes présentaient un plus grand défi pour les meilleurs étudiants que l'année dernière. Des félicitations spéciales vont aux 96 concurrents officiels qui ont atteint une note supérieure ou égale à 90 sur 100.

Le Centre d'éducation en mathématiques et en informatique croit fortement qu'il est très important pour les étudiant(e)s d'apprendre à résoudre des problèmes de mathématiques ainsi que d'apprendre à écrire de bonnes solutions à ces problèmes. Plusieurs étudiants développent leurs solutions raisonnablement bien, tandis que d'autres n'incluent aucune explication avec leurs réponses.

Un grand merci va au comité du concours Euclide qui rassemble annuellement les problèmes du concours et réussit à accomplir la tâche difficile de concevoir des problèmes accessibles et stimulants sur le même examen.

Un grand merci aux étudiant(e)s qui ont écrit, aux parents qui les ont soutenus et aux enseignant(e)s qui les ont aidés pour votre participation continue et votre soutien. Nous espérons que vous avez apprécié le concours et savouré les défis qu'il a présentés. Nous espérons que les concours de mathématiques continuent à nourrir votre amour et intérêt pour les mathématiques.

Remarques particulières

1. Moyenne: 9,5

Cette question a été très bien réussie.

2. Moyenne: 9,4

Cette question a été très bien réussie.

3. Moyenne: 7,6

La partie (a) a été bien réussie. La partie (b) a été assez bien réussie. Certains élèves ont compté moins de dix-huit 9 ou n'ont pas vu le seul 8 dans la différence. La partie (c) a été assez bien réussie. Certains élèves n'ont pas remarqué que l'ordonnée du sommet doit être négative puisque le sommet est situé en dessous de l'axe des abscisses.

4. Moyenne: 7,0

La partie (a) a été bien réussie. Dans la partie (b), les élèves ont utilisé diverses approches pour démontrer qu'il y a une différence de 15 cm^2 entre l'aire du grand cercle et celle du petit cercle. Les meilleures solutions ont utilisé des valeurs exactes au lieu d'approximations décimales.

5. Moyenne: 6,3

Bon nombre d'élèves ont réussi la partie (a). L'erreur la plus commune a été de ne pas convertir les pourcentages en forme décimale. Dans la partie (b), un nombre à peu près égal d'élèves ont choisi l'une ou l'autre des approches suggérées dans les solutions 1 et 2. Avec chaque approche, les faiblesses les plus communes ont été l'omission de certains cas possibles ou la suggestion d'une équation sans justification.

6. Moyenne: 4,9

Dans la partie (a), les élèves ont soit obtenu la bonne réponse ou ont semblé ne pas savoir comment aborder la solution. Bon nombre d'entre eux ont tenté sans succès de résoudre le problème à l'aide de logarithmes. Certains ont obtenu la valeur de y , mais n'ont pas donné celle de x . La partie (b) a été plutôt bien réussie. La plupart des élèves ont utilisé l'approche de la solution 1. L'erreur la plus commune a été l'omission d'un des cas. Parmi les élèves qui ont utilisé l'approche de la solution 2, certains ont suggéré que le triangle doit être semblable au triangle remarquable 3-4-5, mais sans justification.

7. Moyenne: 3,7

Les élèves ont éprouvé de la difficulté dans la partie (a). Certaines solutions n'ont pas obtenu le maximum de points à cause de l'utilisation de variables non définies ou de la présentation d'équations sans indications de ce qu'elles représentaient. La partie (b) a été plutôt bien réussie. L'erreur la plus commune a été l'omission des cas où $x = 0$ et/ou $y = 0$.

8. Moyenne: 2,9

Dans la partie (a), les élèves ont utilisé une variété de constructions. Bon nombre d'entre eux ont prolongé deux segments de manière que le quadrilatère soit perçu comme la différence de deux triangles rectangles. D'autres ont coupé le quadrilatère en parties plus simples, en utilisant des triangles, un rectangle, un trapèze. La plupart des élèves ont réussi à calculer une nouvelle longueur en utilisant des triangles semblables. Beaucoup d'élèves ont cru que l'on demandait l'aire du parallélogramme. Beaucoup d'élèves ont utilisé des approximations décimales au lieu des valeurs exactes. Dans la partie (b), la difficulté principale a porté sur le changement de base. Un grand nombre d'élèves n'ont pas vu la nécessité de changer la base du logarithme.

9. Moyenne: 1,1

Les deux parties de ce problème étaient difficiles et les élèves n'ont pas connu beaucoup de succès. Dans la partie (a), bon nombre d'élèves ont fait appel à des techniques de comptage à l'aide de factorielles ou de $\binom{n}{k}$, mais sans succès. Beaucoup d'élèves ont réussi à compter le nombre de chaînes qui comportaient la suite *ABBA*, mais sans tenir compte du nombre de chaînes qui comportaient deux ou trois copies de la suite *ABBA*. Quelques élèves ont réussi à compter le nombre de chaînes directement (par une méthode récursive) au lieu de compter la situation complémentaire. Dans la partie (b), des élèves ont utilisé avec succès une variété de constructions: la rotation de triangles à l'extérieur du carré, le pliage du triangle à l'intérieur, le prolongement de droites perpendiculaires aux diagonales. Ceux et celles qui ont fait appel à une construction significative ont presque tous obtenu 4 ou 5 des 5 points accordés pour ce problème.

10. Moyenne: 0,3

La plupart des élèves qui ont tenté de résoudre la partie (a) ont utilisé un tableau ou une liste des possibilités pour calculer la probabilité. On a attribué 1 point sur 2 à ceux qui ont utilisé cette approche, tout en oubliant quelques résultats ou en comptant des résultats deux fois. Bon nombre d'élèves ont obtenu un dénominateur erroné (et habituellement un numérateur erroné). Dans la partie (b), certains élèves ont obtenu la fonction définie par $f(n) = 2n - 1$, tout en mentionnant des nombres premiers, sans toutefois justifier leur démarche. Très peu d'élèves ont tenté de résoudre la partie (c). La plupart des solutions réussies ont fait appel aux puissances de 2 ou au produit de nombres premiers distincts. Quelques élèves ont obtenu des formules exactes pour $P(N)$ pour des classes particulières de nombres.

Veillez visiter notre site Web à cemc.uwaterloo.ca pour télécharger le Concours Euclide 2016, avec solutions complètes.

STUDENTS / ÉLÈVES

Students are listed in alphabetical order. / Les élèves sont nommés en ordre alphabétique.

Plaques	Chenxuan Bob Cui	Semiahmoo S.S.	Surrey, BC
	Jennifer Guo	Marc Garneau C.I.	North York, ON
	Kai Sun	A.B. Lucas S.S.	London, ON
	Waley Zhang	New Westminster S.S.	New Westminster, BC
	Daniel Zhou	Centennial Collegiate	Saskatoon, SK

Each plaque winner receives a \$500 cash prize from the Centre for Education in Mathematics and Computing. /

Chaque élève qui reçoit une plaque recevra aussi un prix de 500 \$ du Centre d'éducation en mathématiques et en informatique.

Honourable Mentions /	Thomas Guo		North York, ON
Mentions Honorables	Richard Kang	Dr. E.P. Scarlett H.S.	Calgary, AB
