## Overall Comments

The year 2016 marked the fourteenth writings of the Fryer, Galois and Hypatia Contests. The FGH Contests are designed to give students in Grades 9, 10 and 11 an additional mathematical challenge during the school year, and one that requires full written solutions. Being able to do mathematics is an important skill; being able to communicate one's findings (in mathematics or in any other field) is also very important.

We were very pleased this year to see another healthy increase in the number of participants in these Contests. In general, many students writing these Contests are doing a better job each year of writing clear solutions to the problems. That being said, there is always work that can be done to help them improve these skills. Some students reduced their scores because they gave answers rather than solutions or presented untidy or illegible solutions.

The averages on the Fryer, Galois and Hypatia Contests this year were 25.4, 22.6 and 26.4, respectively. We will continue to try to keep the averages on these papers in this range. Here are some specific comments on the problems.

## Fryer Contest

1. Average: 9.5

This question was very well done. In part (c), some students did not explicitly state the relationship between the variables.

2. Average: 8.1

This problem was well done. In parts (a) and (b), many students struggled to identify the speeds in metres per second. Instead they used the steps as the speed. Our markers gave part marks for the corresponding correct answers in steps, and carried through these results to the following parts. In part (d), a common mistake was the assumption that both people kept moving forward incrementally; many such students never showed or realized that Paul would pass Esther. Additionally, many students misunderstood or misread the question in terms of when Paul started.

3. Average: 5.3

Part (a) was generally well done, but some students did not make the connection that the median divides the area of a triangle into two triangles with equal areas. In part (b), solutions involving the Pythagorean Theorem were the most common. Some students struggled to label the diagram correctly given the information in the question; for example, many students thought  $FH = 32$ . In part (c), the majority of students struggled with determining that the area of  $KLMN$  is 126. They missed making the connection that the median divides the area of a triangles into two triangles with equal areas. Also, in part (c), many students were correctly able to represent the area of  $KLMN$  in terms of  $x$ , by using right triangles, but could not equate their area to something helpful that would allow them to solve. A few students identified that  $PQ$  is parallel to  $LN$  and  $PQ = \frac{1}{2}LN$  and used these properties to solve for  $x$ .

4. Average: 2.5

A number of students were able to solve (a) by identifying 124 as the minimum sum on the BINGO card. However, a good portion of students did not include 0 in their sum and claimed a minimum sum of 155. In part (b), many students identified the minimum sum of 126. Their justification explained what they did to achieve that sum, but did not connect what they were doing to why the smallest sum was 126. For part (c), the biggest struggle was where to begin. Most provided examples of rows/diagonals that had a sum of 177, but students needed to make the connection to the maximum possible sum of 180.

## Galois Contest

1. Average: 8.9

This question was well done. There were a number of students who gave the number of buckets after the first one rather than giving the bucket number, resulting in an "off-by-one" answer. Also many students did not answer the questions asked and gave the bucket number rather than number of discs or vice versa.

## 2. Average: 6.0

There was reasonable success on this problem. Some students did not have a great feeling for how the shaded border worked and there were many mistakes because of that. Students who understood how the border worked did quite well.

## 3. Average: 5.9

Part (a) was well done. Part (b) was a mix of excellent solutions and less elegant ones. In both parts (a) and (b), many students struggled to provide exact answers and to simplify their answers correctly. Part (c) was difficult and not done well. Many students could not come up with a proper process and struggled with finding the individual areas needed to calculate the shaded area. Again in this part, they struggled to find exact answers.

## 4. Average: 1.8

Part (a) was done fairly well. Part (b) had many students who obtained the correct answer but did not get full marks due to having other answers (that were not correct) or not justifying the exclusion of other answers. In parts (c) and (d), some students found the answers through a trial and error method which did not get many marks due to lack of justification. There were very few complete solutions to (c) and (d).

**Hypatia Contest**

## 1. Average: 9.3

This question was well done. A number of students had the correct answer to (c) but did not present their solution clearly. Common errors included transposing or misreading ratios and stopping with one more conversion still to do.

## 2. Average: 8.9

Part (a) was very well done. In part (b), a common error was reporting the length of half of the chord (24) instead of the length of the entire chord (48). In part (c), common issues were providing the correct answer with rough calculations instead of proper, readable presentation, and using the Pythagorean theorem with incorrect identification of the hypotenuse.

## 3. Average: 5.1

Many students had good success with parts (a) and (b); the most common error was to record  $f(405) = 3^4 \times 5$  or  $f(405) = 3^4$  instead of  $f(405) = 4$ . In (c), many students wrote long lists of numbers and crossed out factors from the numerator and denominator. Factors of 3 were often missed with this approach. Some students did an organized count of factors of 3 but miscounted, for example by treating  $54 = 6 \times 3^2$  instead of  $54 = 2 \times 3^3$ . In (d), some students identified that  $f(a+b) = 7$  for a single pair of integers  $a$  and  $b$  but without justification that  $f(a+b) = 7$  for all possible pairs. A number of students concluded that  $f(a+b) = 7$  by considering  $f(3^7(3x+y))$  but without a convincing argument why  $3x+y$  is not a multiple of 3.

## 4. Average: 3.1

Part (a) was well done. In part (b), there were numerous variations on the profit function. With a correct profit function, students must still justify the maximum. Methods such as completing the square, using  $\frac{-b}{2a}$  or even calculus were acceptable. Reading the maximum off a calculator without elaboration did not earn full marks. In (c), some students determined the prices to maximize profit but did not report LP's corresponding profit. Some students tried to maximize EP's profit at the start, treating LP's price as fixed.

**Please visit our website at [cemc.uwaterloo.ca](http://cemc.uwaterloo.ca) to download the 2016 Fryer, Galois and Hypatia Contests, plus full solutions.**

### Commentaires généraux

L'année 2016 est la quatorzième édition des concours Fryer, Galois et Hypatie. Les concours de FGH ont été créés pour donner aux étudiants de 9e, 10e et 11e année (sec. III, IV et V) un défi mathématique supplémentaire pendant l'année scolaire qui exige des solutions écrites complètes. Être capable de faire des mathématiques est une aptitude importante. Pouvoir communiquer ses conclusions (en mathématiques ou autres domaines) est aussi très important.

Nous sommes ravis cette année de constater une croissance du nombre de participants à ces concours. En général, plusieurs des étudiants participant à ces concours s'améliorent d'année en année en ce qui concerne écrire des solutions claires. Cependant, il y a toujours du travail à faire pour les aider à développer leurs aptitudes. Certains des étudiants ont eu des notes plus basses car ils présentaient uniquement des réponses au lieu de solutions ou des solutions non soignées ou illisibles.

Cette année, les moyennes des concours Fryer, Galois et Hypatie étaient de 25,4, 22,6 et 26,4 respectivement. Nous tenterons de continuer à conserver cette gamme pour les moyennes de ces examens. Voici quelques commentaires spécifiques sur les problèmes de ces examens.

### Concours Fryer

#### 1. Moyenne: 9,5

Cette question a été très bien réussie. Dans la partie (c), certains élèves n'ont pas indiqué de façon explicite la relation entre les variables.

#### 2. Moyenne: 8,1

Cette question a été bien réussie. Dans les parties (a) et (b), bon nombre d'élèves ont éprouvé de la difficulté à exprimer les vitesses en mètres par seconde. Ils ont plutôt exprimé la réponse en pas ou en pas par seconde. On leur a accordé une partie des points pour la bonne réponse exprimée en pas ou en pas par seconde, tout en suivant la justesse de leur travail dans les parties subséquentes. Dans la partie (d), certains élèves ont cru que Paul et Esther partaient en même temps. D'ailleurs, bon nombre d'élèves n'ont pas compris quand Paul partait.

#### 3. Moyenne: 5,3

La partie (a) a été plutôt bien réussie, mais beaucoup d'élèves n'ont pas saisi que la médiane divise un triangle en deux triangles de même aire. Dans la partie (b), la plupart des solutions ont fait appel au théorème de Pythagore. Certains élèves ont mal transcrit les données du problème sur une figure; par exemple, bon nombre d'élèves ont utilisé  $FH = 32$ . Dans la partie (c), la plupart des élèves ont éprouvé de la difficulté à démontrer que  $KLMN$  a une aire de 126. Ils n'ont pas saisi que la médiane divise un triangle en deux triangles de même aire. De plus, beaucoup d'élèves ont réussi à représenter l'aire de  $KLMN$  en fonction de  $x$ , à l'aide de triangles rectangles, mais n'ont pas pu créer une égalité qui pouvait leur être utile. Quelques élèves ont démontré que  $PQ$  est parallèle à  $LN$  et que  $PQ = \frac{1}{2}LN$ , tout en utilisant ces propriétés pour déterminer la valeur de  $x$ .

#### 4. Moyenne: 2,5

Bon nombre des élèves ont réussi à résoudre la partie (a) en saisissant que les cases d'une carte de BINGO avaient une somme minimale de 124. Or, bon nombre d'élèves n'ont pas inclus la valeur de 0 dans la case du milieu et ils ont obtenu une somme minimale de 155. Dans la partie (b), beaucoup d'élèves ont obtenu la valeur minimale de 126 pour la somme. Ils ont expliqué comment ils ont obtenu cette valeur, mais sans justifier pourquoi il s'agissait de la valeur minimale de 126. Dans la partie (c), beaucoup d'élèves n'ont pas su par où commencer. La plupart d'entre eux ont donné des exemples de rangées et de diagonales avec une somme de 177, mais il fallait créer un lien avec la somme maximale possible de 180.

**Concours Galois**

## 1. Moyenne: 8,9

Cette question a été bien réussie. Certains élèves ont répondu en donnant le nombre de seaux après le premier au lieu du numéro du seau, ce qui a eu pour résultat que les réponses étaient décalées de 1. D'autres n'ont pas bien lu les consignes, et ont donné le numéro du seau au lieu du nombre de disques dans le seau ou vice versa.

## 2. Moyenne: 6,0

Cette question a été assez bien réussie. Certains élèves ont éprouvé de la difficulté par rapport à la bordure et sa construction, ce qui a causé beaucoup d'erreurs. Ceux et celles qui ont compris la construction de la bordure ont bien réussi.

## 3. Moyenne: 5,9

La partie (a) a été bien réussie. Dans la partie (b), on a reçu des solutions élégantes et d'autres moins réussies. Dans les parties (a) et (b), beaucoup d'élèves ont éprouvé de la difficulté à travailler avec des valeurs exactes. La partie (c) était difficile et n'a pas été bien réussie. Bon nombre d'élèves n'ont pas réussi à trouver une approche qui leur permettrait d'obtenir l'aire des figures nécessaires au calcul de l'aire de la partie ombrée. Ils ont aussi éprouvé de la difficulté à travailler avec des valeurs exactes.

## 4. Moyenne: 1,8

La partie (a) a été assez bien réussie. Dans la partie (b), beaucoup d'élèves ont obtenu la bonne réponse, sans recevoir le nombre maximum de points, puisque leur réponse était accompagnée d'autres réponses erronées ou excluait des cas sans justification. Dans les parties (c) et (d), certains élèves ont procédé par essais systématiques, sans justification suffisante pour se mériter le maximum de points. Très peu d'élèves ont donné une réponse complète dans les parties (c) et (d).

**Concours Hypatie**

## 1. Moyenne: 9,3

Cette question a été bien réussie. Certains élèves ont obtenu la bonne réponse dans la partie (c), sans toutefois présenter une solution claire. Les erreurs les plus fréquentes ont porté sur une lecture erronée des rapports ou la transposition des éléments d'un rapport. Certains élèves se sont arrêtés avant d'avoir terminé.

## 2. Moyenne: 8,9

La partie (a) a été très bien réussie. Dans la partie (b), beaucoup d'élèves ont utilisé la longueur (24) de la demi-corde plutôt que celle (48) de la corde. Dans la partie (c), beaucoup d'élèves ont présenté un brouillon indiquant des calculs par-ci par-là ou ont utilisé la relation de Pythagore tout en identifiant mal l'hypoténuse.

## 3. Moyenne: 5,1

Beaucoup d'élèves ont connu du succès dans les parties (a) et (b); malgré cela, trop d'élèves ont répondu  $f(405) = 3^4 \times 5$  ou  $f(405) = 3^4$  au lieu de  $f(405) = 4$ . Dans la partie (c), beaucoup d'élèves ont écrit de longues listes de nombres pour ensuite rayer des facteurs au numérateur et au dénominateur, ce qui a eu pour effet que certains diviseurs 3 ont été omis. Certains élèves ont compté les diviseurs 3 de façon organisée, tout en commettant quelques erreurs, par exemple en utilisant  $54 = 6 \times 3^2$  au lieu de  $54 = 2 \times 3^3$ . Dans la partie (d), certains élèves ont obtenu  $f(a+b) = 7$  pour des valeurs particulières de  $a$  et de  $b$ , mais sans justifier que  $f(a+b) = 7$  pour tous les couples  $(a, b)$  qui vérifient les conditions données. Certains élèves ont conclu que  $f(a+b) = 7$  en considérant  $f(3^7(3x+y))$ , mais sans justifier de façon convaincante pourquoi  $3x+y$  n'est pas un multiple de 3.

## 4. Moyenne: 3,1

La partie (a) a été bien réussie. Dans la partie (b), la fonction profit pouvait prendre un nombre de formes différentes. Les élèves devaient ensuite justifier sa valeur maximale. On pouvait utiliser un bon nombre

d'approches, comme compléter le carré, faire appel à la symétrie de la parabole, utiliser  $\frac{-b}{2a}$  ou même la dérivée. La lecture d'une réponse sur une calculatrice, sans explications, n'a pas mérité le maximum de points. Dans la partie (c), certains élèves ont déterminé les prix qui maximisaient le profit, tout en omettant d'indiquer le profit correspondant de LP. Certains élèves ont tenté de maximiser le profit de EP au départ, tout en traitant le prix de LP comme un prix fixe.

**Veillez visiter notre site Web à [cemc.uwaterloo.ca](http://cemc.uwaterloo.ca) pour télécharger les concours Fryer, Galois et Hypatie 2016, avec solutions complètes.**
