Overall Comments

The year 2017 marked the fifteenth writings of the Fryer, Galois and Hypatia Contests. The FGH Contests are designed to give students in Grades 9, 10 and 11 an additional mathematical challenge during the school year, and one that requires full written solutions. Being able to do mathematics is an important skill; being able to communicate one's findings (in mathematics or in any other field) is also very important.

We were very pleased this year to see another healthy increase in the number of participants in these Contests. In general, many students writing these Contests are doing a better job each year of writing clear solutions to the problems. That being said, there is always work that can be done to help them improve these skills. Some students reduced their scores because they gave answers rather than solutions or presented untidy or illegible solutions.

The averages on the Fryer, Galois and Hypatia Contests this year were 26.1, 23.8 and 22.0, respectively. We will continue to try to keep the averages on these papers in this range. Here are some specific comments on the problems.

Fryer Contest

1. Average: 7.9

Parts (a) and (b) were very well done. In part (c), students struggled to earn full marks because their justification was either incomplete or invalid. Statements such as "31 is not divisible by 6 or 9 and therefore you cannot purchase exactly 31 pens" were not correct. This is because there exist integers, such as 15, that are not divisible by 6 or 9 but can be obtained by adding multiples of 6 and 9 together. For example, you could purchase 1 package of red pens and 1 package of blue pens to have 15 pens in total. Students who earned full marks were able to (i) identify that the greatest common divisor of 6 and 9 is 3 and justify why it is important that 31 is not a multiple of 3, or (ii) identify all possible cases, including the zero cases, for the number of red or blue pen packages.

2. Average: 7.3

Students did well on part (a), but seemed to struggle with setting up and solving the more complicated inequalities in parts (b) and (c). One common mistake in parts (b) and (c) was including a value for m and w outside the range of possible values (ex. $m = 2, 3, 4$ or $w = 15, 16, 17, 18, 19, 20, 21$). In part (b), a good number of students could set up the inequalities, but were unable to simplify them to a point where the values of m were apparent. In part (c), students could easily identify that $w > 15$, but found it more challenging to identify $w < \frac{43}{2}$. In part (c), students were able to earn full marks for identifying $w > 15$ and using trial and error to identify possible values of w after Fiona's weekend games.

3. Average: 7.0

Students who understood the chord property shown in the example did very well on this question. A common error among students was misunderstanding the chord property to involve addition versus multiplication. Very few marks were awarded when this error was made. Students who did well on parts (a) and (b), but poorly on part (c), were able to apply the chord property when there was one point of intersection. The most common error with two points of intersection was multiplying all the line segment lengths on a chord. For example, $(3)(n)(6) = (5)(m)$ or $(3)(n)(6) = (8)(n)$.

4. Average: 4.0

Parts (a), (b), and (c) were done well. There were students who tested smaller powers of two (e.g. $2^2, 2^3, 2^4, 2^5, \dots$) and then identified a pattern among the remainders in order to conclude the answer $\frac{2^{2017} - 2}{3}$. However, full marks were only given to students who could justify the pattern and argue why no more than 2 candies were discarded throughout the entire procedure.

Galois Contest

1. Average: 8.6

This question was quite well done.

2. Average: 6.3

The first three parts were well done. The majority of mistakes were when students gave the answer in dollars instead of time and vice versa. Many students struggled with part (d). A common mistake was to figure out one of the endpoints of the two correct intervals of the answer and then give one interval as an answer: 5:39 a.m. to 6:59 a.m. Students also struggled to give clear justification for their answers.

3. Average: 7.6

Parts (a) and (b) were well done. Part (c) resulted in many different correct solutions. One common mistake was to misinterpret the areas given as the areas of the circles instead of the areas of the squares. Another common mistake was to assume that the length of OC was the sum of the radii of the two circles.

4. Average: 1.4

Part (a) was reasonably well done. A common mistake was to find the ratio of the shaded area to the total area instead of the ratio of the shaded area to the unshaded area. It was rare to see a correct solution to (b) and very rare to see a correct solution to (c). A number of students were able to get to the equation $\frac{m-2}{m+2} = \frac{u}{77}$ in part (b) and occasionally with some trial and error managed to find some values of u .

Hypatia Contest

1. Average: 9.1

This question was very well done. In part (a), a common incorrect answer was 92° and in part (c) a common incorrect answer was 55° by misidentifying the equal angles. In (d), a common error was to not simplify $180^\circ - (180^\circ - z^\circ)$ as z° .

2. Average: 7.4

In part (a), although some students left out either the integer or the row from the answer box, full marks were given if supporting work included both answers. In parts (c) and (d), some students assumed that only odd integers were in the table. In these parts, students with the correct answer lost marks if they did not explain their work. In part (d), a common incorrect answer was 151, when students neglected to include row 49.

3. Average: 4.3

In part (a), part marks were awarded for listing x -coordinates without y -coordinates, or for listing only one of the two points. In part (c), a nice alternate solution involved a generic equation for a parabola and line, using the fact that $x = p$ and $x = q$ solved both equations. A common error was assuming that the equation for the parabola was $y = (x - p)(x - q)$. In part (d), many students could generate a complicated equation in one variable (either x or y) but were unable to solve. A nice alternate solution involved using several values of k to generate points on the parabola, and then determining the equation of the parabola given its vertex is at the origin.

4. Average: 1.2

This problem was much more challenging, and many students got part (a) only. In part (b), many misinterpreted an expression like $G(6, 3)$ to represent an actual zigzag number instead of the number of zigzag numbers with certain properties. Many students observed properties such as $G(6, 1) = L(6, 6)$ but without proper justification.

Please visit our website at cemc.uwaterloo.ca to download the 2017 Fryer, Galois and Hypatia Contests, plus full solutions.

Commentaires généraux

L'année 2016 est la quinzième édition des concours Fryer, Galois et Hypatie. Les concours de FGH ont été créés pour donner aux étudiants de 9e, 10e et 11e année (sec. III, IV et V) un défi mathématique supplémentaire pendant l'année scolaire qui exige des solutions écrites complètes. Être capable de faire des mathématiques est une aptitude importante. Pouvoir communiquer ses conclusions (en mathématiques ou autres domaines) est aussi très important.

Nous sommes ravis cette année de constater une croissance du nombre de participants à ces concours. En général, plusieurs des étudiants participant à ces concours s'améliorent d'année en année en ce qui concerne écrire des solutions claires. Cependant, il y a toujours du travail à faire pour les aider à développer leurs aptitudes. Certains des étudiants ont eu des notes plus basses car ils présentaient uniquement des réponses au lieu de solutions ou des solutions non soignées ou illisibles.

Cette année, les moyennes des concours Fryer, Galois et Hypatie étaient de 26,1, 23,8 et 22,0 respectivement. Nous tenterons de continuer à conserver cette gamme pour les moyennes de ces examens. Voici quelques commentaires spécifiques sur les problèmes de ces examens.

Concours Fryer

1. Moyenne: 7,9

Les parties (a) et (b) ont été très bien réussies. Dans la partie (c), les élèves ont éprouvé de la difficulté à obtenir le maximum de points en présentant des arguments incomplets ou non valides. Un énoncé comme «31 n'est pas divisible par 6 ou par 9 et on ne peut donc pas acheter exactement 31 stylos» est incorrect. En effet, il existe des entiers, comme 15, qui ne sont pas divisibles par 6 ou par 9, mais qui peuvent être obtenus en additionnant des multiples de 6 et de 9. Par exemple, on peut acheter 1 boîte de stylos rouges et 1 boîte de stylos bleus pour obtenir un total de 15 stylos. Les élèves qui ont obtenu le maximum de points ont su (i) reconnaître que le plus grand commun diviseur de 6 et de 9 est 3 et justifier l'importance du fait que 31 n'est pas un multiple de 3, ou (ii) reconnaître tous les cas possibles pour le nombre de boîtes de stylos rouges ou bleus, y compris les cas où il y a zéro boîte.

2. Moyenne: 7,3

Les élèves ont bien réussi dans la partie (a), mais ils ont éprouvé de la difficulté à établir et à résoudre les inéquations dans les parties (b) et (c). Dans les parties (b) et (c), par exemple, les élèves ont souvent choisi des valeurs de m et de g à l'extérieur des intervalles permis (p. ex. $m = 2, 3, 4$ ou $g = 15, 16, 17, 18, 19, 20, 21$). Dans la partie (b), un bon nombre d'élèves ont réussi à établir les inéquations, mais n'ont pas réussi à les simplifier jusqu'au point où les valeurs de m étaient apparentes. Dans la partie (c), les élèves ont pu établir facilement que $g > 15$, mais ils ont éprouvé de la difficulté à déterminer que $g < \frac{43}{2}$. Dans la partie (c), les élèves ont pu obtenir le maximum de points en établissant que $g > 15$ et en utilisant des essais systématiques pour déterminer les valeurs possibles de g à la fin du weekend.

3. Moyenne: 7,0

Les élèves qui ont compris la propriété des cordes illustrée dans le préambule ont bien réussi cette question. Bon nombre d'élèves ont tenté d'utiliser la relation en remplaçant la multiplication par une addition. Peu de points ont été accordés dans ce cas. Les élèves qui ont réussi les parties (a) et (b), mais pas la partie (c), ont réussi à utiliser la relation avec un point d'intersection. Avec plus d'un point d'intersection, l'erreur la plus commune a été de multiplier toutes les longueurs des parties d'une même corde. Par exemple, en faisant $(3)(n)(6) = (5)(m)$ ou $(3)(n)(6) = (8)(n)$.

4. Moyenne: 4,0

Les trois premières parties ont été bien réussies. Certains élèves ont procédé par tâtonnements avec quelques puissances de 2 (p. ex., $2^2, 2^3, 2^4, 2^5, \dots$) pour remarquer une régularité parmi les restes et conclure que la réponse était $\frac{2^{2017} - 2}{3}$. Or, le maximum de points a été accordé à ceux qui ont pu justifier la régularité et expliquer pourquoi un maximum de 2 bonbons ont été rejetés pendant toutes les étapes du jeu.

Concours Galois

1. Moyenne: 8,6

Cette question a été bien réussie.

2. Moyenne: 6,3

Les trois premières parties ont été bien réussies. Les erreurs les plus communes ont porté sur les unités utilisées, soit des heures au lieu de dollars ou vice versa. Beaucoup d'élèves ont éprouvé de la difficulté dans la partie (d). Beaucoup d'entre eux ont déterminé une extrémité d'un des deux intervalles de la réponse pour ne donner qu'un intervalle comme réponse, p. ex., de 5 h 39 à 6 h 59. Ils ont aussi éprouvé de la difficulté à justifier leur réponse avec clarté.

3. Moyenne: 7,6

Les parties (a) et (b) ont été bien réussies. La partie (c) a donné lieu à une variété de bonnes solutions. Bon nombre d'élèves ont interprété les aires données comme des aires de disques au lieu d'aires de carrés. Bon nombre d'élèves ont considéré, à tort, que la longueur de OC était égale à la somme des rayons des deux cercles.

4. Moyenne: 1,4

La partie (a) a été assez bien réussie. Bon nombre d'élèves ont commis l'erreur de considérer r comme le rapport de l'aire de la partie ombrée à l'aire totale plutôt que le rapport de l'aire de la partie ombrée à l'aire de la partie non ombrée. Les solutions correctes de la partie (b) étaient plutôt rares et celles de la partie (c) étaient encore plus rares. Certains élèves ont réussi à obtenir l'équation $\frac{m-2}{m+2} = \frac{u}{77}$ dans la partie (b) et à l'occasion, réussir à obtenir certaines valeurs de u par tâtonnements.

Concours Hypatie

1. Moyenne: 9,1

Cette question a été très bien réussie. Dans la partie (a), la réponse erronée 92° était assez fréquente, tandis que dans la partie (c), on a souvent répondu 55° après avoir mal identifié les angles égaux. Dans la partie (d), bon nombre d'élèves ont mal simplifié $180^\circ - (180^\circ - z^\circ)$, qui devait donner z° .

2. Moyenne: 7,4

Dans la partie (a), on a accordé le maximum de points même si l'élève avait oublié d'inscrire le nombre ou le numéro de la rangée dans la case de réponse, à condition d'avoir fourni du travail pour appuyer les deux réponses. Dans les parties (c) et (d), certains élèves ont supposé que le tableau ne comportait que des nombres impairs. Dans ces parties, il fallait bien expliquer son travail pour obtenir le maximum de points. Dans la partie (d), beaucoup d'élèves n'ont pas inclus la rangée 49, ce qui a mené à la réponse erronée 151.

3. Moyenne: 4,3

Dans la partie (a), on a accordé une partie des points lorsqu'une des deux coordonnées était absente ou lorsqu'on ne donnait que les coordonnées d'un point. Dans la partie (c), certains élèves ont résolu le problème en utilisant une équation générale d'une parabole et une équation générale d'une droite et le fait que les valeurs $x = p$ et $x = q$ donnaient les mêmes valeurs de y dans les deux équations. Bon nombre d'élèves ont supposé, à tort, que l'équation de la parabole était $y = (x - p)(x - q)$. Dans la partie (d), bon nombre d'élèves ont réussi à générer une équation complexe en x ou en y , mais sans réussir à la résoudre. Une autre solution faisait appel à plusieurs valeurs de k pour générer des points sur la parabole, pour ensuite déterminer l'équation de la parabole sachant que son sommet est à l'origine.

4. Moyenne: 1,2

Ce problème présentait tout un défi et bon nombre d'élèves n'ont réussi que la partie (a). Dans la partie (b), plusieurs élèves considéraient qu'une expression comme $G(6, 3)$ représentait un nombre zigzag au

lieu du nombre de nombres zigzags satisfaisant à une condition. D'autres utilisaient des relations comme $G(6, 1) = L(6, 6)$, mais sans justification.

Veillez visiter notre site Web à cemc.uwaterloo.ca pour télécharger les concours Fryer, Galois et Hypatie 2017, avec solutions complètes.
