 Fredric Suresh, Mayfield S.S., Brampton, ON

The Centre for Education in Mathematics and Computing is pleased to announce the results of the 2018 Canadian Senior and Intermediate Mathematics Contests.

Our congratulations go to all who participated in this year's CSMC and CIMC. This year's Contests were resounding successes, with averages of 29.4 and 32.1, respectively.

As always, we would like to thank the hard-working Problems Committees. Many of the members of these Committees are active secondary school teachers who volunteer their time and contribute dozens of hours of expertise. Without their intriguing and sometimes amusing problems, these Contests would not be possible.

We would also like to thank all participants, both teachers and students. We hope that the papers provided you with some interesting mathematics to think about and play with. Thank you for your support! Please continue to encourage your colleagues and fellow students to become involved in our activities.

Le Centre d'éducation en mathématiques et en informatique a d'annoncer les résultats du Concours canadiens de mathématiques de niveau supérieur et intermédiaire 2018.

Nos félicitations vont à tous les participants du CCMS et du CCMI de cette année. Les Concours de cette année retentissaient de succès, avec des moyennes de 29,4 et 32,1, respectivement.

Nous aimerions surtout remercier les Comités de problèmes pour leur dur travail. Plusieurs membres de ces Comités sont des enseignant(e)s d'école secondaire actifs qui offre leur temps et contribuent des douzaines d'heures d'expertise. Sans leurs problèmes perspicaces et amusants, ces Concours ne seraient pas possibles.

Nous aimerions remercier aussi tous les participants incluant les enseignants et les étudiants. Nous espérons que les concours vous ont offert des mathématiques intéressantes qui vous ont amusées et portées à réfléchir. Merci pour votre soutien continué!

CANADIAN SENIOR MATHEMATICS CONTEST

Part A

1. Very well done. The only common incorrect answer was 128. This answer was the result of not recognizing of the word “each”.
Average: 4.7
2. Very well done. The main common incorrect answer was 3.6 minutes. This answer was the result of assuming that “ x times as quickly” means to multiply the time by x .
Average: 4.5
3. This problem was quite well done. Common errors included adding probabilities of independent events, or calculating as if the first crayon were replaced before removing the second crayon. Some students assumed that there were twelve objects total: six named crayon, three named red, two named blue and one named green.
Average: 3.8
4. Many students were unable to make progress with this question, particularly if they did not factor the numerator and reduce the fraction by the factor $10^n + 1$. Common errors included assuming that $a = 567$, rather than that the sum of the digits in a is 567; this led students to some difficult and error-prone manipulations with logs. Only a few students discerned the pattern that a consists of n 3s.
Average: 2.3
5. Most students were able to choose coordinates and then find the heights of C and D above the x -axis. Many students then went on to attempt to determine the coefficients of in the equation of the parabola. Mistakes were often made here and few students successfully determined the correct distance between the two x -intercepts.
Average: 1.4
6. Most students found this question quite challenging. Often students would expand, write $\tan A$ and $\tan B$ in terms of sine and cosine, or divide by $\tan A \tan B$, but were not able to get much further. Some students who were able to determine the values of $\tan A$ and $\tan B$ either were unable to get further or used a calculator to determine a decimal approximation of the answer. Most students who successfully solved this problem had a solution similar to our Solution 2.
Average: 0.2

Part B

1. In this question, parts (a), (b) and (c) were quite well done. The most common error in (b) was using the slope $-\frac{1}{3}$ that would apply for a line perpendicular to L_2 . There were many different techniques attempted or used successfully to solve (d). Some students even rotated the figure and used calculus for the area between two “curves”. A common error was to apply the $\frac{4}{9}$ ratio in each dimension instead of using $\frac{2}{3}$.
Average: 8.1
2. Part (a) was generally well done. In the remaining parts, many students used trial and error; while this approach finds solutions, it does not demonstrate that no other solutions exist. In some cases, trial and error found only some of the required solutions.
Average: 3.6
3. Part (a) was not done as well as we had hoped. A lot of students misinterpreted the question and assumed that each string needed to include each character from the set, and thus ended up with only 4 strings. Part (b) could be solved in various ways. Of the students who successfully completed this problem, most used either a direct count or an indirect count. Very few set up a recursive solution. Very few students attempted part (c).
Average: 0.6

CANADIAN INTERMEDIATE MATHEMATICS CONTEST

Part A

1. Very well done. Minor arithmetic errors were the most common mistakes.
Average: 4.9
2. Very well done. A common error was made with the interpretation of the number of goats being two times the number of cows.
Average: 4.7
3. Very well done. Most errors involved using addition instead of subtraction with the Pythagorean Theorem. Some students used trigonometry and their calculator which led to a loss of precision.
Average: 4.4
4. Well done. Many students had issues dealing with the “endpoints”, using $x - 8$ instead of $x - 7$ when there are 8 terms starting at x .
Average: 2.3
5. Many students found at least one point that solved the problem. The point $(10, 9)$ was missed most often. Some students found $(4, 1)$, $(7, 5)$ and $(10, 9)$ but not $(1, 5)$ and $(4, 9)$ on the other side of PQ (or vice versa). Since we asked for five points, many answers included points R for which $\triangle PQR$ did not have an area of 6.
Average: 1.3
6. This was a challenging problem. Part marks were awarded for demonstrating a full understanding of a specific case (e.g. when $k = 20$ or when $n = 10$).
Average: 0.4

Part B

1. Well done. The most common error was giving only the solution $x = 4$ for the equation $x^2 = 16$ instead of $x = \pm 4$. A number of students were unable to find the one ordered pair of positive integers that solved $5x + 3y = 19$.
Average: 8.0
2. Part (a) was well done. Part (b) was most often done correctly usually with a good explanation. The marking team was impressed by the variety of solutions presented. Part (c) was fairly well done. Incorrect solutions often resulted when students did not simplify the equation before solving it. Part (d) was a challenge for most students. The three cases to draw two black balls and one gold ball were often not considered.
Average: 4.1
3. Part (a) was reasonably well done by students using similar triangles and setting up the equation $\frac{x}{3+x} = \frac{6}{10}$. Solving this to get the correct answer of $\frac{9}{2}$ was a bit of an unexpected challenge. Few students were able to construct similar triangles in part (b). Those that did used one of several different constructions often yielding the correct answer of $\frac{15}{17}$. However, sometimes insufficient justification was provided. The combination of geometry and number theory in part (c) challenged everyone.
Average: 1.9

CONCOURS CANADIEN DE MATHÉMATIQUES DE NIVEAU SUPÉRIEUR

Partie A

1. Ce problème a été très bien réussi. L'erreur la plus fréquente était de répondre 128. Cette erreur provient du fait de ne pas considérer le mot « chacune » dans l'énoncé.
Moyenne: 4,7
2. Ce problème a été très bien réussi. L'erreur la plus fréquente était de répondre 3,6 minutes. Cette erreur vient du fait que « x fois plus vite » ne veut pas dire qu'il faut multiplier par x .
Moyenne: 4,5
3. Ce problème a été assez bien réussi. Les erreurs les plus fréquentes étaient d'additionner les probabilités d'événements indépendants ou de calculer les probabilités comme si le premier crayon était replacé dans le pot avant de retirer la deuxième. Certains étudiants ont pensé qu'il y avait douze objets au total: six objets appelés crayons, trois appelés rouge, deux appelés bleus, et un appelé vert.
Moyenne: 3,8
4. De nombreux étudiants ont rencontré des difficultés à progresser sur cette question, et ce, surtout s'ils n'avaient pas factorisé par le dénominateur et simplifié la fraction en utilisant le facteur $10^n + 1$. Une erreur fréquente était de considérer $a = 567$, plutôt que la somme des chiffres de a est 567. Ceci amena de nombreux étudiants à s'engager dans des manipulations de logarithme compliquées entraînant de nombreuses d'erreurs. Seulement quelques étudiants ont décelé que a était composé de n 3s.
Moyenne: 2,3
5. La plupart des étudiants ont réussi à choisir des coordonnées pour trouver les hauteurs de C et D au dessus de l'axe des x . De nombreux étudiants ont alors tenté de déterminer les coefficients de l'équation de la parabole. Beaucoup ont fait des erreurs et seulement quelques étudiants ont trouvé la distance exacte entre les deux intersections avec l'axe des abscisses.
Moyenne: 1,4
6. La plupart des étudiants ont trouvé cette question assez difficile. Souvent, les étudiants ont développé l'équation en écrivant $\tan A$ and $\tan B$ en termes de sinus et cosinus ou ont divisé par $\tan A \tan B$ mais n'ont pas réussi à aller beaucoup plus loin. Souvent, ceux qui ont pu déterminer les valeurs de $\tan A$ et $\tan B$ ont, soit utilisé une calculatrice pour déterminer une approximation de la réponse attendue, soit sont restés bloqués. La plupart des étudiants ayant résolu ce problème ont utilisé une démarche similaire à notre solution 2.
Moyenne: 0,2

Partie B

1. Pour cette question, les parties (a), (b) et (c) ont été assez bien réussies. L'erreur la plus fréquente dans la partie (b) était d'utiliser la pente $-\frac{1}{3}$, qui correspondrait à une ligne perpendiculaire à L_2 . Plusieurs techniques différentes ont été utilisées avec plus ou moins de réussite pour résoudre (d). Certains étudiants ont même opérés une rotation de la figure pour calculer l'aire entre deux « courbes ». Une erreur fréquente était d'appliquer le ratio $\frac{4}{9}$ à chaque dimension au lieu d'utiliser $\frac{2}{3}$.
Moyenne: 8,1
2. La partie (a) a été globalement bien réussie. Dans les parties restantes, beaucoup d'étudiants ont procédé par tâtonnements. Même si cette méthode permet de trouver des solutions, elle ne permet pas de démontrer qu'aucune autre solution n'existe. Dans certains cas, la méthode par tâtonnements n'a permis de trouver que certains des résultats attendus.
Moyenne: 3,8

3. La partie (a) n'a pas été aussi bien réussie que ce que nous avons espéré. Beaucoup d'étudiants ont mal interprété la question et ont supposé que chaque mot devait comprendre chaque lettre de l'ensemble prédéterminé. Ils n'ont ainsi trouvé que 4 mots seulement. La partie (b) pouvait être résolue de diverses façons. Parmi les étudiants qui ont résolu ce problème, la plupart ont utilisé un comptage direct ou indirect. Très peu ont mis en place une solution récursive. Très peu ont essayé de résoudre la partie (c).

Moyenne: 0,6

CONCOURS CANADIEN DE MATHÉMATIQUES DE NIVEAU INTERMÉDIAIRE

Partie A

1. Ce problème a été très bien réussi. Les erreurs les plus fréquentes étaient des erreurs d'arithmétique.
Moyenne: 4,9
2. Ce problème a été très bien réussi. Une erreur fréquente provient de l'interprétation du nombre de chèvres étant deux fois le nombre de vaches.
Moyenne: 4,7
3. Ce problème a été très bien réussi. La plupart des erreurs venaient du fait d'utiliser une addition au lieu d'une soustraction avec le théorème de Pythagore. Quelques étudiants ont fait appel à la trigonométrie pour résoudre ce problème mais leurs calculs ont entraîné une perte de précision.
Moyenne: 4,4
4. Ce problème a été bien réussi. Beaucoup d'étudiants ont rencontré des difficultés avec les « extrémités » du tableau, et ont utilisé $x - 8$ au lieu de $x - 7$ pour 8 nombres commençant par x .
Moyenne: 2,3
5. Beaucoup d'étudiants ont trouvé au moins un point qui permettait de résoudre le problème. Le plus souvent, le point $(10, 9)$ a été oublié. Quelques étudiants ont trouvé $(4, 1)$, $(7, 5)$ et $(10, 9)$ mais pas $(1, 5)$ and $(4, 9)$ de l'autre côté de PQ (ou vice versa). Comme nous demandions cinq points, beaucoup d'étudiants ont inclus un point R dans leur réponse, pour lequel $\triangle PQR$ n'avait pas une aire de 6.
Moyenne: 1,3
6. C'était un problème difficile. Une partie des points a été attribuée pour ceux ayant démontré qu'ils avaient parfaitement compris une situation donnée (ex: $k = 20$ ou quand $n = 10$).
Moyenne: 0,4

Partie B

1. Ce problème a été bien réussi. L'erreur la plus fréquente était de répondre $x = 4$ pour l'équation $x^2 = 16$ au lieu de $x = \pm 4$. Certains étudiants n'ont pas réussi à trouver la paire d'entiers strictement positifs et ordonnés qui permette de résoudre $5x + 3y = 19$.
Moyenne: 8,0
2. La partie (a) a été bien réussie. Le plus souvent, la partie (b) a été faite correctement, avec généralement une bonne explication de la démarche. L'équipe de correction a été impressionnée par la diversité des réponses présentées. La partie (c) a été assez bien réussie. Les réponses erronées sont souvent apparues par manque de simplification de l'équation avant de la résoudre. La partie (d) était difficile pour la plupart des étudiants. Les trois cas pour tirer deux balles noires et une dorée n'ont souvent pas été considérés.
Moyenne: 4,1
3. La partie (a) a été plutôt bien réussie par les étudiants ayant utilisé des triangles similaires et ayant posé l'équation $\frac{x}{3+x} = \frac{6}{10}$. Résoudre ce problème et trouver la bonne réponse $\frac{9}{2}$ a posé des difficultés inattendues. Peu d'étudiants ont été capables de contruire des triangles similaires dans la partie (b). Ceux qui l'ont fait ont utilisé plusieurs constructions différentes, donnant souvent la bonne réponse $\frac{15}{17}$. Cependant, parfois les explications apportées n'étaient pas suffisantes. Dans la partie (c), la combinaison de géométrie et théorie des nombres a été difficile pour tout le monde.
Moyenne: 1,9
