### Overall Comments

The year 2018 marked the sixteenth writings of the Fryer, Galois and Hypatia Contests. The FGH Contests are designed to give students in Grades 9, 10 and 11 an additional mathematical challenge during the school year, and one that requires full written solutions. Being able to do mathematics is an important skill; being able to communicate one's findings (in mathematics or in any other field) is also very important.

We were very pleased this year to see another healthy increase in the number of participants in these Contests. In general, many students writing these Contests are doing a better job each year of writing clear solutions to the problems. That being said, there is always work that can be done to help them improve these skills. Some students reduced their scores because they gave answers rather than solutions or presented untidy or illegible solutions.

The averages on the Fryer, Galois and Hypatia Contests this year were 24.1, 21.6 and 23.4, respectively. We will continue to try to keep the averages on these papers in this range. Here are some specific comments on the problems.

### Fryer Contest

1. Average: 9.2

This question was generally well done except for students who were confused about whether they were finding number of boxes of fruit or cost of the fruit.

2. Average: 8.5

This question was very well done with some minor arithmetic errors and some switching of times, distances and speeds between Tyler and Paul.

3. Average: 3.7

This question was not done as well as expected. Those that did the question fully quite often used diagrams and trial and error rather than algebra leading to many small mistakes.

4. Average: 2.7

Parts (a) and (b) were relatively well done and part (c) was also attempted by many students. Most students on these parts were giving a list of all of the Bauman numbers for each case and quite often not justifying that they had all the cases. Part (d) was not done well (or at all) and even those students who got the answer or something close to it did not give a very complete argument.

### Galois Contest

1. Average: 9.0

Very well done. In part (d), a common mistake was to give a range, but not find the actual values or to indicate that the solutions were integers.

2. Average: 8.8

Overall this question was very well done. In part (c), some students assumed that  $SQ$  was a bisector of  $\angle RQP$ . Some students didn't recognize that the radii in the diagram were all the same length.

3. Average: 2.4

Generally poorly done. Some students did not know the formula for calculating the volume of the cylinder. A more methodical recording of their calculations would have helped many students with their solution. Some students converted  $\pi$  into a decimal approximation and this made the solution more complicated than necessary. In parts (a) and (b), students took many incorrect approaches. In part (b), many students missed the second part of the question (finding the depth of the water). In part (c), of the students who found the correct range the majority did not explain their solution well.

4. Average: 1.5

A challenging question for most students. Many students missed one or two of the possible sums in part (a). If they had listed the sums that they had found, they could have earned part marks. Many students tried to

expand the quadratic in part (b). This was not helpful. In parts (c) and (d) a few students recognized that counting factors was part of the solution, but could not explain their reasoning.

## Hypatia Contest

### 1. Average: 9.3

Parts (a) and (b) were very well done. In general, part (c) was well done. Most students were able to create an equation and solve for  $n$ . The most common error in (c) had to do with students struggling with the how to deal with the first six tests. This would lead to equations where the numerator would be  $14 + 20n$  instead of  $84 + 20n$  or the denominator was  $n + 1$  instead of  $n + 6$ .

### 2. Average: 7.8

Well done. One very common struggle for students in this question was providing their final answer in the requested units. For example, in parts (b) and (c), students would provide their answer in minutes or hours instead of the time of day. Since this was such a common struggle for all students markers were very generous when awarding marks for this question. Some students rounded their results and lost precision in their answer. For example, in part (a), the occasional student would round their answer to 1.3 hours, multiply 1.3 by 60 and state the trip took 78 minutes. In part (c), there was lots of confusion about when Jessica left Botown. Many students assumed that Jessica left at 7:16 a.m. instead of at 7:00 a.m. Students were not able to realize that the departure information was provided in part (b). For the most part, (d) was very well done. Students were able to introduce variables for either time or distance, create the necessary equations and solve for them.

### 3. Average: 3.5

Part (a) was very well done, but students struggled with parts (b), (c), and (d). The only common error in part (a) was students assuming  $T_4 = 4$  because  $T_1 = 1$ ,  $T_2 = 2$ , and  $T_3 = 3$ . Many such students then used the correct approach to find  $T_5$  assuming  $T_4 = 4$  (i.e.  $T_5 = 25 = 1 + 1 \times 2 \times 3 \times 4$ ). Students really struggled to prove the identity in part (b). Many students did not know where to start and others would often assume what they were trying to prove, that is assume  $T_{n+1} = T_n^2 - T_n + 1$  and then get another true expression and claim what they started with was true. In many instances, part (c) was done better than part (b). The most common solution was expanding both expressions so they were in terms of  $T_n$  and showing that  $T_n^2 + 1$  was a factor of both. A surprising number of students earned full marks by using long division to show that remainder of  $(T_n T_{n+1} - 1) \div (T_n + T_{n+1})$  was zero. Very few students were able to correctly argue that  $T_{2018}$  is not a perfect square. Those who did used a variety of approaches such as noticing a pattern with the units digit of  $T_n$  when  $n > 2$  or showing that  $T_{2018}$  is between two consecutive perfect squares.

### 4. Average: 2.8

Part (a)(i) was very well done. In (a)(ii), students were easily able to find the points of intersection of the parabolas, but struggled to provided sufficient justification in their explanation why  $V_1 P V_2 Q$  was a parallelogram. In order to earn full marks in (a)(ii) students had to show that certain parallelogram properties were true for quadrilateral  $V_1 P V_2 Q$ . For example, if students were using slope to argue the quadrilateral was a parallelogram students had to show the slopes of both sets of opposite sides were equal. Students really struggled finding and justifying the conditions on  $c$  and  $b$  in part (b). However, a number of students were able to find the vertex of parabola  $y = -x^2 + bx + c$  to earn part marks.

Please visit our website at [cemc.uwaterloo.ca](http://cemc.uwaterloo.ca) to download the 2018 Fryer, Galois and Hypatia Contests, plus full solutions.

### Commentaires généraux

L'année 2018 est la seizième édition des concours Fryer, Galois et Hypatie. Les concours de FGH ont été créés pour donner aux étudiants de 9e, 10e et 11e année (sec. III, IV et V) un défi mathématique supplémentaire pendant l'année scolaire qui exige des solutions écrites complètes. Être capable de faire des mathématiques est une aptitude importante. Pouvoir communiquer ses conclusions (en mathématiques ou autres domaines) est aussi très important.

Nous sommes ravis cette année de constater une croissance du nombre de participants à ces concours. En général, plusieurs des étudiants participant à ces concours s'améliorent d'année en année en ce qui concerne écrire des solutions claires. Cependant, il y a toujours du travail à faire pour les aider à développer leurs aptitudes. Certains des étudiants ont eu des notes plus basses car ils présentaient uniquement des réponses au lieu de solutions ou des solutions non soignées ou illisibles.

Cette année, les moyennes des concours Fryer, Galois et Hypatie étaient de 24,1, 21,6 et 23,4 respectivement. Nous tenterons de continuer à conserver cette gamme pour les moyennes de ces examens. Voici quelques commentaires spécifiques sur les problèmes de ces examens.

### Concours Fryer

1. Moyenne: 9,2

Cette question a été plutôt bien réussie, sauf par des élèves qui ne semblaient pas savoir s'ils devaient déterminer les nombres de boîtes de fruits ou les couts des boîtes de fruits.

2. Moyenne: 8,5

Cette question a été très bien réussie. Des élèves ont commis quelques erreurs mineures d'arithmétique et quelques erreurs en attribuant des temps, des distances et des vitesses à Théo ou à Paul.

3. Moyenne: 3,7

Cette question n'a pas été aussi bien réussie que prévu. Ceux qui ont tenté de tout résoudre ont souvent fait appel à des diagrammes ou procédé par tâtonnements au lieu d'utiliser l'algèbre, ce qui a amené de petites erreurs.

4. Moyenne: 2,7

Les parties (a) et (b) ont été plutôt bien réussies et bon nombre d'élèves ont entrepris de résoudre la partie (c). La plupart de ces élèves ont présenté une liste de tous les nombres de Bauman dans chaque cas, sans justifier que tous les nombres y étaient. La partie (d) n'a pas été bien réussie. Même les élèves qui ont obtenu la réponse n'ont pas présenté un argument complet.

### Concours Galois

1. Moyenne: 9,0

Cette question a été très bien réussie. Dans la partie (d), certains élèves ont donné un intervalle plutôt que de mentionner qu'il s'agissait des entiers dans l'intervalle.

2. Moyenne: 8,8

Cette question a été très bien réussie. Dans la partie (c), certains élèves ont supposé que  $SQ$  était la bissectrice de l'angle  $RQP$ . Certains élèves n'ont pas reconnu que les rayons du cercle étaient tous de la même longueur.

3. Moyenne: 2,4

Cette question n'a pas été bien réussie. Certains élèves ne savaient pas comment calculer le volume d'un cylindre (aire de la base  $\times$  hauteur). Beaucoup d'élèves auraient mieux réussi s'ils avaient tenu compte de leurs calculs de façon plus méthodique. Certains élèves ont remplacé  $\pi$  par une approximation décimale, ce qui a compliqué les choses. Dans les parties (a) et (b), beaucoup d'élèves ont suivi une approche erronée. Dans la partie (b), beaucoup d'élèves n'ont pas répondu à la deuxième partie du problème (la profondeur de l'eau). Dans la partie (c), la plupart des élèves qui ont déterminé l'intervalle des valeurs de  $h$  n'ont pas expliqué leur démarche de façon satisfaisante.

## 4. Moyenne: 1,5

Cette question offrait tout un défi. Beaucoup d'élèves ont omis une ou deux des sommes dans la partie (a), ce qui leur a coûté quelques points. Beaucoup d'élèves ont développé le produit de binômes dans la partie (b), ce qui n'était pas utile. Dans les parties (c) et (d) quelques élèves ont constaté qu'il fallait compter le nombre de diviseurs, mais ils ne pouvaient pas expliquer leur raisonnement.

**Concours Hypatie**

## 1. Moyenne: 9,3

Les parties (a) et (b) ont été très bien réussies. La partie (c) a été plutôt bien réussie. La plupart des élèves ont déterminé une équation qu'ils ont pu résoudre pour déterminer la valeur de  $n$ . L'erreur la plus commune dans la partie (c) portait sur la façon de traiter les six premières interrogations. Ceci menait à une équation avec  $14 + 20n$  pour numérateur au lieu de  $84 + 20n$  ou avec  $n + 1$  pour dénominateur au lieu de  $n + 6$ .

## 2. Moyenne: 7,8

Cette question a été bien réussie. Beaucoup d'élèves ont éprouvé de la difficulté à répondre en utilisant les unités appropriées. Par exemple, dans les parties (b) et (c), ils répondaient en donnant un nombre d'heures ou de minutes au lieu de donner l'heure prévue d'arrivée. Étant donné qu'il s'est agi d'une difficulté très répandue, les correcteurs ont été généreux dans l'attribution des points. Certains élèves ont arrondi leurs calculs, ce qui a entraîné des erreurs. Par exemple, dans la partie (a), certains élèves ont arrondi  $1\frac{1}{3}$  h à 1,3 h, puis ils ont multiplié 1,3 par 60 pour conclure que Jessica a mis 78 minutes pour conduire de B à A au lieu de 80 minutes. Dans la partie (c), beaucoup d'élèves ne semblaient pas savoir quand Jessica a quitté Bobourg. Beaucoup d'élèves ont supposé qu'elle a quitté à 7 h 16 au lieu de 7 h 00. Or, cette information était donnée dans la partie (b). La partie (d) a été très bien réussie. Les élèves ont utilisé une variable pour exprimer le temps ou la distance, puis ils ont déterminé une équation qu'ils ont réussi à résoudre.

## 3. Moyenne: 3,5

La partie (a) a été très bien réussie, mais les élèves ont éprouvé de la difficulté dans les parties (b), (c) et (d). Dans la partie (a), bon nombre d'élèves ont supposé que  $T_4 = 4$  puisque  $T_1 = 1$ ,  $T_2 = 2$  et  $T_3 = 3$ . La plupart d'entre eux ont utilisé ce résultat pour déterminer la valeur de  $T_5$  (c.-à-d. en calculant  $T_5 = 25 = 1 + 1 \times 2 \times 3 \times 4$ ). Les élèves ont éprouvé de la difficulté à démontrer l'identité dans la partie (b). Ils ne savaient pas comment s'y prendre, ou bien ils supposaient que l'identité  $T_{n+1} = T_n^2 - T_n + 1$  était vraie pour ensuite démontrer qu'un résultat connu était vrai et conclure que l'identité est vraie. Dans bien des cas, la partie (c) a été mieux réussie que la partie (b). La solution la plus commune pour la partie (c) consistait à exprimer chaque expression en fonction de  $T_n$  et de montrer que  $T_n^2 + 1$  était un facteur de chaque expression. Bon nombre d'élèves ont fait appel à l'algorithme de division pour démontrer que le reste de la division de  $(T_n T_{n+1} - 1) \div (T_n + T_{n+1})$  était égal à 0. Très peu d'élèves ont réussi à démontrer par un argument solide que  $T_{2018}$  n'est pas un carré parfait. Ceux qui ont réussi à le faire ont remarqué une variété de régularités dans le chiffre des unités de  $T_n$  lorsque  $n > 2$  ou ils ont démontré que  $T_{2018}$  était situé entre deux carrés parfaits consécutifs.

## 4. Moyenne: 2,8

La partie (a)(i) a été très bien réussie. Dans la partie (a)(ii), les élèves ont facilement déterminé les points d'intersection des paraboles, mais ils ont éprouvé de la difficulté à justifier pourquoi  $S_1PS_2Q$  est un parallélogramme. Pour obtenir le maximum de points dans la partie (a)(ii), les élèves devaient démontrer que le quadrilatère  $S_1PS_2Q$  satisfaisait à certaines propriétés des parallélogrammes. Par exemple, ils pouvaient démontrer à l'aide des pentes que les pentes des côtés opposés étaient égales deux à deux. Dans la partie (b), les élèves ont éprouvé de la difficulté à établir des conditions pour  $c$  et  $b$ . Certains élèves ont tout de même réussi à déterminer les coordonnées du sommet de la parabole d'équation  $y = -x^2 + bx + c$  pour se mériter quelques points.

Veillez visiter notre site Web à [cemc.uwaterloo.ca](http://cemc.uwaterloo.ca) pour télécharger les concours Fryer, Galois et Hypatie 2018, avec solutions complètes.
