Overall Comments

The FGH Contests are designed to give students in Grades 9, 10 and 11 an additional mathematical challenge during the school year, and one that requires full written solutions. Being able to do mathematics is an important skill; being able to communicate one's findings (in mathematics or in any other field) is also very important.

The averages on the Fryer, Galois and Hypatia Contests this year were 19.9, 19.0 and 23.3, respectively. Here are some specific comments on the problems.

We would like to thank all participants, both teachers and students. We hope that the papers provided you with some interesting mathematics to think about and play with. Thank you for your support! Please continue to encourage your colleagues and fellow students to become involved in our activities.

Fryer Contest

1. Average: 8.1

Part (a) was very well done. Common errors included switching the numbers for hits and misses, and using the information from the given example. Part (b) was well done. Some students determined that $h = 77$ instead of $7h = 77$. In part (c), many students determined that $m = 4$ or $m = 5$, but failed to justify why these are the only two answers. An alternate solution was to realize that the scores must be multiples of 10. Between 85 and 105 there are only two scores, 90 and 100, that are multiples of 10, with corresponding m values are 4 and 5.

2. Average: 7.2

Part (a) was very well done. Part (b) turned out to be the most challenging part of Problem 2. Some incorrectly thought that 48 was the sum of the areas of $\triangle JKL$ and $\triangle KLM$ and ignored the overlap area entirely, while some treated 48 as the area of the rectangle $JKLM$ and gave 8 as the final answer. Part (c) was very well done with many students answering in only two or three lines. Some students made part (c) harder than it needed to be by calculating the side lengths of the shape and using them to calculate the area of the shape; this sometimes worked, but often did not.

3. Average: 2.8

Part (a) was generally well done. Most were able to determine the prime factorization of 675 but then some miscalculated the number of divisors. Another common error was to attempt to write out all the positive divisors of 675 and miss some. Part (b) was challenging for many. Some students gave the correct answer but did not show that it had 18 positive divisors. Very few students earned full marks for part (c). Those who had the correct strategy sometimes missed a case or missed a number in a case, and many of these also did not mention anything about the case of four or more prime factors.

4. Average: 1.8

This was a difficult problem to read and to work through. Part (a) produced the most success among the parts of this problem. Some attempts did not follow the pattern correctly, and others made subtraction errors as the pattern was followed. There were few correct answers to (b). A common error was to assume that the pattern repeated after 10 turns. In parts (c) and (d), some students who attempted a solution did not fully understand the idea of a winning strategy, often giving a specific scenario dictating not just what the winner should do, but also what the loser must do, and thus not considering the various choices the loser would have at that turn.

Galois Contest

1. Average: 8.2

All parts of this problem were done well. A common error in both parts (a) and (b) was using the wrong ratio, while in part (c), some students added x to both parts of the ratio instead of to just one.

2. Average: 5.5

Part (a) was well done. In part (b), many struggled with finding the answer because it was in terms of k ,

and not a purely numerical answer. In part (c), students seemed to have difficulty viewing the triangle as having base PR and height OQ .

3. Average: 4.2

Parts (a) and (c) were well done. In part (b), a number of students used only powers of 2 to find the unknown, and others gave an answer that would not generate a perfect square. A lot of students tried to prove part (d) using a specific example, rather than using a more general argument, possibly an algebraic one. Many students tried to add powers of 10 by adding their exponents.

4. Average: 1.0

Problem 4 was quite difficult. In parts (a) and (b), students had difficulty partitioning Bauman strings into manageable cases. In part (c), some students who tried to use a recursive formula did not fully justify why the formula works in general.

Hypatia Contest

1. Average: 7.6

This problem was very well done. Occasionally, errors were made in earlier parts, and attempts to follow through the errors when marking were made. In part (a), a common incorrect answer was $4x$ (likely giving the diameter instead of the radius), with correct measurements in parts (b) through (d).

2. Average: 7.6

Parts (a) and (b) could be done by inspection and were done very well. Part (c), being written, was often missing explanation or much of the explanation was hidden in the solutions to parts (a) and (b). Students who worked to two decimal places, instead of using fractions, often got a final answer of 43 not 42.

3. Average: 6.1

In part (a), the problem asks for the first four terms in the sequence, and this includes the starting value of “3”. Often students only gave the next three terms of the sequence, or gave the first five terms of the sequence. In part (b), the optimal solution is to work backwards, and then there are two separate quadratic equations to solve. The first quadratic equation gives one solution of “ $x = 0$ ”, but this does not yield any real solutions when placed in the second equation. We were looking to see that this was considered. An alternative solution is to work forwards and obtain a quartic equation. This quartic factors into two quadratics, one of which has no real solutions. Part (c) was fairly well done. Most students wrote down the correct quadratic equation and solved it. For part (d), many students wrote down two simultaneous quadratic equations, and they were given one mark for attempting to solve this system. A small number of students proceeded as in our solutions and subtracted these equations to get to the final answer. A slightly larger number of students substituted one quadratic into the other leading to a quartic equation. Solutions that found the solutions to this quartic equation from a calculator were not well rewarded, as these solution steps need to be presented for full marks. Two of the solutions of this quartic produce the “ a, a, a, \dots ” sequence, which should be eliminated. The other two solutions are the required solutions.

4. Average: 2.0

Part (a) was solved correctly by most students who read and tried it. Part (b) required a carefully worded argument to justify why N had no other prime factors, other than 2 or 3. For this justification, some students proceeded as in our solutions; however, most students looked at the form of $f(N) = (1+a_1)(1+a_2) \cdots (1+a_k)$ and the number of ways this could be 6 if all of the a_i 's are positive. Most students were unable to find the smallest N in part (c) and struggled to find a useful way to start part (d).

Please visit our website at cemc.uwaterloo.ca to download the 2022 Fryer, Galois and Hypatia Contests, plus full solutions.

Commentaires généraux

Les concours de FGH ont été créés pour donner aux étudiants de 9e, 10e et 11e année (sec. III, IV et V) un défi mathématique supplémentaire pendant l'année scolaire qui exige des solutions écrites complètes. Être capable de faire des mathématiques est une aptitude importante. Pouvoir communiquer ses conclusions (en mathématiques ou autres domaines) est aussi très important.

Cette année, les moyennes des concours Fryer, Galois et Hypatie étaient de 19,9, 19,0 et 23,3 respectivement. Voici quelques commentaires spécifiques sur les problèmes de ces examens.

Nous aimerions remercier tous les participants incluant les enseignants et les étudiants. Nous espérons que ces concours ont fourni des mathématiques intéressantes qui vous ont amusés et poussés à réfléchir. Merci pour votre soutien continué!

Concours Fryer

1. Moyenne: 8,1

La partie (a) a été très bien réussie. Les erreurs les plus fréquentes étaient de confondre les nombres de lancers réussis et ratés, et d'utiliser les renseignements de l'exemple donné. La partie (b) a été bien réussie. Quelques élèves ont déterminé que $h = 77$ au lieu de $7h = 77$. Dans la partie (c), plusieurs élèves ont déterminé que $m = 4$ ou $m = 5$, mais n'ont pas réussi à justifier pourquoi ces deux réponses sont les deux seules réponses possibles. Une autre solution consistait à remarquer que les pointages doivent être des multiples de 10. Entre 85 et 105, il n'y a que deux pointages, soit 90 et 100, qui sont des multiples de 10, d'où les valeurs correspondantes de m sont 4 et 5.

2. Moyenne: 7,2

La partie (a) a été très bien réussie. La partie (b) s'est avérée être la plus difficile du problème 2. Quelques élèves ont pensé à tort que 48 était la somme des aires des triangles JKL et KLM et ont entièrement ignoré le fait que les deux triangles se chevauchent. D'autres élèves ont pensé à tort que 48 était l'aire du rectangle $JKLM$ et ont donc donné 8 comme réponse finale. La partie (c) a été très bien réussie. Plusieurs élèves ont pu résoudre le problème en deux ou en trois lignes seulement. Quelques élèves ont rendu la partie (c) plus difficile qu'elle ne devait l'être en calculant les longueurs des côtés de la figure et en les utilisant pour calculer l'aire de la figure; quoique cette approche ait parfois fonctionné, elle échouait souvent.

3. Moyenne: 2,8

La partie (a) a été bien réussie en général. La plupart des élèves ont réussi à exprimer 675 sous forme de factorisation première. Or, certains ont mal calculé le nombre de diviseurs. Une autre erreur fréquente était d'essayer d'écrire tous les diviseurs positifs de 675 et d'en oublier certains. Le problème de la partie (b) a posé un véritable défi pour plusieurs élèves. Quelques élèves ont trouvé la bonne réponse mais n'ont pas démontré que l'entier admettait 18 diviseurs positifs. Très peu d'élèves ont obtenu un maximum de points pour la partie (c). Ceux qui avaient la bonne stratégie ont parfois négligé de considérer un cas ou de considérer un nombre dans un cas; de plus, beaucoup d'entre eux n'ont pas considéré le cas de quatre facteurs premiers ou plus.

4. Moyenne: 1,8

Ce problème était difficile à lire et à résoudre. Parmi les parties du problème, la partie (a) était la mieux réussie. Certaines tentatives de réponse n'ont pas bien suivi la régularité tandis que d'autres ont bien suivi la régularité mais ont fait des erreurs de soustraction. Il y a eu peu de réponses correctes à la partie (b). Une erreur fréquente était de supposer que la régularité se répétait à chaque cycle de 10 tours. Dans les parties (c) et (d), quelques élèves qui ont tenté une solution semblent ne pas avoir bien saisi l'idée d'une stratégie gagnante. Ces élèves décrivaient souvent un scénario spécifique dans lequel ils dictaient non seulement ce que le gagnant devait faire mais aussi ce que le perdant devait faire (et ne considéraient donc pas les différents choix que le perdant aurait à ce tour).

Concours Galois

1. Moyenne: 8,2

Toutes les parties de ce problème ont été bien réussies. Une erreur fréquente dans les parties (a) et (b) était d'utiliser le mauvais rapport. De même, dans la partie (c), quelques élèves ont ajouté x aux deux termes du rapport plutôt qu'à un seul.

2. Moyenne: 5,5

La partie (a) a été bien réussie. Dans la partie (b), plusieurs élèves ont eu du mal à exprimer la réponse en fonction de k . Dans la partie (c), les élèves semblent avoir eu du mal à saisir le fait que le triangle avait pour base PR et pour hauteur OQ .

3. Moyenne: 4,2

Les parties (a) et (c) ont été bien réussies. Dans la partie (b), un certain nombre d'élèves n'ont utilisé que des puissances de 2 pour trouver la valeur inconnue tandis que d'autres ont donné une réponse pour laquelle le produit $572 \times \ell$ n'est pas un carré parfait. Pour la partie (d), plusieurs élèves ont rédigé une démonstration à l'aide d'un exemple spécifique plutôt qu'en utilisant un argument plus général ou algébrique. Plusieurs élèves ont essayé d'additionner les puissances de 10 en additionnant leurs exposants.

4. Moyenne: 1,0

Le problème 4 a posé un vrai défi. Dans les parties (a) et (b), les élèves ont eu du mal à partitionner les chaînes Bauman en des cas gérables. Dans la partie (c), certains élèves qui ont essayé d'utiliser une formule récursive n'ont pas assez bien justifié la raison pour laquelle la formule fonctionne en général.

Concours Hypatie

1. Moyenne: 7,6

Ce problème a été très bien réussi. Parfois, des erreurs ont été commises dans les parties précédentes. Ces erreurs ont été prises en compte lors de la correction des parties ultérieures. Dans la partie (a), une réponse incorrecte fréquente était $4x$ (ce qui donnait probablement le diamètre au lieu du rayon), avec des mesures correctes dans les parties (b) à (d).

2. Moyenne: 7,6

Les parties (a) et (b) pouvaient être résolues par inspection et étaient très bien réussies. Dans la partie (c), il manquait souvent une explication adéquate aux solutions; cette explication étant parfois « cachée » dans les solutions aux parties (a) et (b). Les élèves qui ont travaillé avec des nombres arrondis au centième près (au lieu de travailler avec des fractions) ont souvent obtenu une réponse finale de 43 et non de 42.

3. Moyenne: 6,1

Dans la partie (a), il faut déterminer les quatre premiers termes de la suite, qui comprennent déjà le premier terme 3. Souvent, les élèves n'ont donné que les trois termes suivants de la suite ou ont donné les cinq premiers termes de la suite. Dans la partie (b), la meilleure solution était de procéder à rebours et de résoudre les deux équations du second degré. La première équation du second degré a pour solution « $x = 0$ ». Or, lorsqu'on pose cette solution dans la seconde équation, celle-ci n'admet aucune solution réelle. Lors de la correction du concours, on a cherché à voir si cela avait été pris en compte. Une autre solution aurait été de procéder dans l'autre sens de manière à obtenir une équation du quatrième degré que l'on aurait pu factoriser en deux équations du second degré; l'une d'entre elles n'admettant aucune solution réelle. La partie (c) a été assez bien réussie. La plupart des élèves ont écrit la bonne équation du second degré et l'ont bien résolue. Pour la partie (d), plusieurs élèves ont écrit deux équations du second degré et ont obtenu un point pour avoir tenté de résoudre ce système. Peu d'élèves ont procédé comme dans nos solutions et ont soustrait ces équations pour arriver à la réponse finale. Un nombre légèrement plus important d'élèves a reporté l'une des équations dans l'autre de manière à obtenir une équation du quatrième degré. Les élèves qui ont obtenu les solutions

de cette équation du quatrième degré à l'aide d'une calculatrice n'ont pas obtenu beaucoup de points car il fallait présenter toutes les étapes de la solution pour obtenir un maximum de points. Parmi les solutions de cette équation du quatrième degré, deux d'entre elles doivent être éliminées puisqu'elles produisent la suite " a, a, a, \dots ". Les deux autres solutions sont les solutions requises.

4. Moyenne: 2.0

La partie (a) a été résolue correctement par la plupart des élèves qui l'ont lue et tentée. Pour la partie (b), il fallait un argument soigneusement formulé pour justifier la raison pour laquelle N n'avait pas de facteurs premiers autres que 2 et 3. Pour cette justification, quelques élèves ont procédé comme dans nos solutions. Cependant, la majorité des élèves ont ciblé la forme $f(N) = (1 + a_1)(1 + a_2) \cdots (1 + a_k)$ dans leurs solutions et ont tenté de déterminer le nombre de manières dont cela pouvait évaluer 6 lorsque tous les a_i sont positifs. La plupart des élèves n'ont pas réussi à déterminer le plus petit N dans la partie (c) et ont donc eu du mal à aborder la partie (d).

Veillez visiter notre site Web à cemc.uwaterloo.ca pour télécharger les concours Fryer, Galois et Hypatie 2022, avec solutions complètes.
