

Problem of the Week

Problem D

The Flavour Foundry

Salt and Pepper are chefs scaling up a recipe for a large banquet. The total amount of dried garlic needed is 60% more than what Salt has in stock and 80% more than what Pepper has in stock. After combining the amounts they have in stock, they find they have more than necessary. What percentage over the required amount do they have? Round your answer to the nearest tenth of a percent.
